Zusammenfassung	1
1. Summary	3
2. Introduction	5
3. Theoretical background	9
3.1. Theoretical fundamentals of unimolecular reactions	9
3.2. The shock tube technique	13
3.2.1. The working principle of the shock tube	14
3.2.2. Calculations of shock wave properties under ideal conditions	17
3.2.3. Determination of shock wave data under real conditions	21
4. Experimental	24
4.1. The shock tube experimental set up	24
4.1.1. The aluminium shock tube	24
4.1.2. The stainless steel shock tube	26
4.2. The gas mixing system	31
4.3. The optical detection setup	34
4.3.1. The ARAS technique.....	34
4.3.2. The calibration of ARAS-lamp	36
4.3.3. UV-absorption experiments.....	40
4.4. Evaluation and experimental data processing	42
4.5. General discussion of probable errors	42
4.6. Chemicals used and synthesis	45
5. The decomposition of unsaturated C₃ hydrocarbon species ..	48
5.1. Unimolecular decomposition of the allyl radical	48
5.1.1. Introduction	48
5.1.2. Experimental	50
5.1.3. Results and Discussion	52
5.2. Unimolecular decomposition of propyne	56
5.2.1. Introduction	56
5.2.2. Experimental	58
5.2.3. Results and Discussion	60

5.3. Unimolecular decomposition of propargyl radical	64
5.3.1. Introduction	64
5.3.2. Experimental	66
5.3.3. Results and Discussion	67
5.4. Unimolecular decomposition of C₃H₂ radical	69
5.4.1. Introduction	69
5.4.2. Experimental	70
5.4.3. Results and Discussion	71
6. The self recombination reaction of propargyl radicals	74
6.1. The reaction C₃H₃ + C₃H₃ → C₆H₆	74
6.1.1. Introduction	74
6.1.2. Experimental	78
6.1.3. Results and Discussion	82
6.2. The reaction C₃H₃ + C₃H₃ → C₆H₅ + H	87
7. Estimation and determination of further rate constants in the C₃H_x system	89
8. Outlook	102
9. Appendix	103
10. References	112
