Abstract / Zusammenfassung	v
List of Symbols	x
1 Introduction	1
1.1 Motivation	1
1.2 Laser Beam Description	2
1.3 Layout of this Thesis	3
2 Analytical Description of Light	5
2.1 Electromagnetic Waves	6
2.1.1 Maxwell Equations in Optical Materials	6
2.1.2 Electric Field in Units of Power	7
2.1.3 The Helmholtz Equation	8
2.2 The Paraxial Approximation	8
2.2.1 Linearly Polarized Light	9
2.2.2 Direction of the Poynting Vector	10
2.2.3 Power Density in a Transverse Plane, Beam Power, Center, and Widths	11
2.2.4 Separation Along Two Transverse Coordinates	13
2.2.5 Propagation Through Ideal Linear Optical Systems	13
2.2.6 Hermite-Gaussian Beams	15
2.2.7 Numerical Propagation of Paraxial Fields	18
2.3 Correlation of the Electric Field	19
2.3.1 Superposition of two Electric Fields	20
2.3.2 Components of the Mutual Coherence	21
2.4 The Wavefront of a Beam	23
3 Wigner Distribution	25

3.1	Primary Properties	26
3.1.1	Definition	26
3.1.2	Wigner Distribution of a Superposition of Beams	27
3.1.3	Power Density Distribution	28
3.1.4	Transverse Poynting Vector	29
3.1.5	Separable Beams	30
3.1.6	Projected Wigner Distribution	31
3.1.7	Propagation Through Linear Optical Systems	34
3.1.8	Interpretation as a Geometrical Phase Space Density	36
3.2	First and Second Order Moments of the Wigner Distribution	36
3.2.1	Effective Radius of Curvature	37
3.2.2	Propagation Through Linear Optical Systems	38
3.2.3	Propagation of the Spatial Second Order Moments Through Free Space	39
3.2.4	Geometric Beam Classification	40
3.3	Modified Wigner Distribution	43
4	Optical Systems	47
4.1	Huygens' Principle	48
4.2	Spreadless System	50
4.2.1	Definition	51
4.2.2	Spherical Interface	52
4.2.3	Thin Lens	54
4.2.4	Aberrations of an Off Axis Thin Lens	56
4.2.5	Aberration of a Cylindrical Lens	57
4.2.6	Adding Aberrations, Normalized Aberration Coefficients	58
4.3	Components of M^2	60
4.3.1	Hermite-Gaussian Beams	62
4.3.2	Beams with Spherical Aberration	63
4.3.3	Beams with Cylindrical-Coma and Cylindrical-Spherical Aberration	65
4.4	Gaussian Beam with Cylindrical-Spherical Aberration	67
4.4.1	Wigner Distribution	69
4.4.2	Power Density Profile	70
4.4.3	Iteratively Calculated Beam Width	72
4.4.4	Components of M^2	75
5	Measurement of an Aberrated Helium Neon Laser	77
5.1	Setup	78
5.1.1	Measurement of the Projected Power Density Profiles	78

5.1.2	Calculation of the Beam Propagation Ratio, M_x^2	81
5.1.3	Reconstruction of the Wigner Distribution	82
5.1.4	Data Evaluation	84
5.2	Cylindrical-Spherical Aberration	85
5.2.1	Setup	85
5.2.2	Results	86
5.3	Cylindrical-Coma Aberration	89
5.3.1	Setup	90
5.3.2	Results	91
5.4	Spherical Aberration	94
5.4.1	How to Obtain the Coefficient of Spherical Aberration	95
5.4.2	Setup	96
5.4.3	Results	97
5.5	Comparison to Shack-Hartmann Systems	99
5.5.1	Setup	99
5.5.2	Results	102
5.6	Conclusion	102
6	Wigner Distribution of a Tapered Semiconductor Laser	105
6.1	Introduction	105
6.2	The Tapered Semiconductor Laser	107
6.3	Experimental Setup and M^2 -Values	109
6.4	Wigner Distribution of the Slow Axis	111
6.5	Conclusion	116
7	Conclusion	117
7.1	Determination of the Wavefront Aberration	118
7.2	Measurements at a Tapered Semiconductor Laser	119
A	Evaluation Formulas	121
A.1	Power Density Profile and Spatial Moments	121
A.2	Transverse Poynting Vector and First Angular Moment	122
A.3	Components of M^2	124
B	Publications	127
