Contents

Introduction **1**

1 Preparing the Ground **7**
1.1 Graphs, Paths, etc. . . . 7
1.2 Path-Systems and Flows . . . 8
1.3 Algorithms . . . 11
1.4 Tail Probabilities . . . 15

2 Length-Bounded Flows and Cuts **17**
2.1 Introduction . . . 19
2.2 Fractional Length-Bounded Flows . . . 23
2.2.1 Single-Commodity Flows . . . 25
2.2.2 Multi-Commodity Flows . . . 29
2.2.3 Approximation of Fractional Flows . . . 32
2.3 Length-Bounded s-t-Cuts . . . 36
2.3.1 Integrality Gap for s-t-Cuts . . . 37
2.3.2 Approximation of s-t-Cuts . . . 39
2.4 Integral Length-Bounded Flows . . . 44
2.4.1 Node- versus Edge-Disjointness . . . 45
2.4.2 Edge- versus Path-Flow . . . 47
2.4.3 Integrality Gap for Integral Flows . . . 48
2.4.4 Approximation and Complexity of Integral Flows . . . 51
2.4.5 Approximation and Complexity for Planar Graphs . . . 55
2.4.6 Minimum-Cut Maximum-Flow Ratio . . . 58

3 k-Splittable Flows and Cuts **61**
3.1 Introduction . . . 62
3.2 Uniform k-Splittable s-t-Flows . . . 65
3.2.1 Properties of Uniform k-Splittable s-t-Flows . . . 66
3.2.2 Maximum-Flow Minimum-Cut . . . 68
3.2.3 Augmenting Path Algorithm . . . 69
3.2.4 Budget-Contrained Flows . . . 73
3.3 General k-Splittable s-t-Flows . . . 74
3.3.1 Approximation for Small Values of k . . . 75

3.3.2 Approximation for Large Values of k 78
3.3.3 Hardness of Approximation 81
3.4 Transshipment Problem 83
3.4.1 Uniform Transshipments and Complexity 83
3.4.2 Algorithm for Uniform Transshipments 87
3.5 Multi-Commodity k-Splittable Flows 91
3.6 Minimum Number of Paths 93

Bibliography **95**

Symbol Index **101**

Index **103**
