

Contents

Nomenclature	VIII
Zusammenfassung	XI
1 Introduction	1
1.1 Emission Problems and Controls	1
1.2 Tasks and Objectives of the Current Work	5
2 CFD Simulation of Coal Combustion	8
2.1 CFD Simulation of Reacting Flows	8
2.1.1 General Transport Equation	8
2.1.2 Discretisation and Solution Procedures	10
2.1.3 Treatment of Chemical Reactions	11
2.2 Modeling of Particulate Two-Phase Flows	13
2.2.1 Euler-Lagrange Approach	14
2.3 Modeling of Coal Combustion Processes	16
2.3.1 Pyrolysis	17
2.3.2 Volatile Combustion	18
2.3.3 Char Burnout	19
2.4 The 3D Combustion CFD-Code AIOLOS	21
3 Formation and Reduction of SO_x and NO_x	23
3.1 SO _x Formation in Coal Combustion	23
3.2 DAP Approach for SO _x Reduction	25
3.3 NO _x Formation in Coal Combustion	26
3.3.1 Mechanisms of NO Formation	26
3.3.2 NO ₂ and N ₂ O Formation	29
3.3.3 Release and Conversion of Coal Nitrogen	31

3.4	Approaches for NO _x Reduction	32
3.4.1	Mechanisms of NO _x Reduction	32
3.4.2	Primary Measures	34
3.4.3	Secondary Measures	36
3.4.4	Hybrid Reburn/SNCR	39
4	Simulation of the Dry Additive Desulfurization Processes	41
4.1	Physical Models for Gas-Particle Reactions	42
4.1.1	Modified Shrinking Core Model (SCM)	43
4.1.2	Simplified Pore Model (PM)	46
4.1.3	Simplified Grain Model (GM)	49
4.2	Modeling of Other Influencing Factors	52
4.2.1	Sulfation Temperature	52
4.2.2	Natural Retention	53
4.3	Simulation and Experimental Results	55
4.3.1	Integration of the DAP Model into AIOLOS	55
4.3.2	Description of the Test Reactor EFCR	55
4.3.3	Comparison of the Gas-Particle Reaction Models	56
4.3.4	Modeling Conditions and Basic Calculation	58
4.3.5	Comparison of Simulation and Measurements	63
4.3.6	Parametric Studies	66
4.4	Lagrangian Modeling of the DAP	71
4.4.1	Implementation with the Lagrangian Approach	71
4.4.2	Comparison of Eulerian and Lagrangian Results	72
4.5	Summary	77
5	Chemical Kinetics and Reduction of Reaction Mechanisms	80
5.1	Chemical Kinetics	80
5.1.1	Elementary Reactions and Rate Coefficients	80
5.1.2	Detailed Reaction Mechanisms	82
5.2	Simplification of Detailed Mechanisms	83
5.2.1	Reduction Procedure	84
5.2.2	Automatic Program for Mechanism Reduction	86
5.3	Reduced Mechanism for CH ₄ -Reburning	88
5.3.1	Skeletal Mechanism	88
5.3.2	QSS-Species and Rate Elimination	88

5.3.3	Reduced Global Mechanism	90
5.4	Reduced Mechanism for Hybrid Reburn/SNCR	93
5.4.1	Skeletal Mechanism	93
5.4.2	QSS-Species and Rate Elimination	93
5.4.3	Reduced Global Mechanism	94
6	Simulations of Reburning and SNCR with Reduced Mechanisms	98
6.1	Implementation of the Reduced Mechanisms	98
6.1.1	Integration of the Reduced Mechanisms into AIOLOS	98
6.1.2	Modeling of Turbulence – Chemistry Interaction	100
6.1.3	Optimisation of the Calculation Procedure	101
6.2	Simulation Results of CH ₄ -Reburning	102
6.2.1	Modeling Conditions	102
6.2.2	Modeling Results	103
6.3	Simulation Results of Hybrid Reburn/SNCR	106
6.3.1	Modeling Conditions	106
6.3.2	Modeling Results and Discussions	107
6.4	Summary	112
7	Influence of Sulfur Compounds on NO_x Formation	114
7.1	Previous Investigations	114
7.2	Experimental Results on EFCR	115
7.2.1	Experimental Conditions	115
7.2.2	Experimental Results	116
7.3	Kinetic Analysis	120
7.4	Summary	124
8	Summary and Conclusions	125
A	Reaction Mechanisms	129
A.1	Mechanism for Reburning	129
A.2	Mechanism for Hybrid Reburn/SNCR	133
A.3	Mechanism for Sulfur Reactions	137
A.4	Mechanism for Chlorine Reactions	141
	Bibliography	143
