CONTENTS

Contents ..... **i**

1 Introduction **1**

2 Background of Transmission Fluctuation Measurements **5**

2.1 A Brief Description of Particle Systems 5

2.1.1 Particle Size and Particle Size Distribution 5

2.1.2 Particle Concentration 7

2.2 Transmission and Extinction 7

2.2.1 Bouguer-Lambert-Beer's Law 7

2.2.2 The Layer Model 9

2.2.3 Discussion 11

2.2.3.1 The Receiving Aperture 11

2.2.3.2 Ray Propagation and Diffraction Pattern 12

2.2.4 Extinction of a Narrow Beam 13

2.2.5 Particle Analysis by Transmission Fluctuations 15

2.3 Review of the Transmission Fluctuation Spectrometry 16

2.3.1 TFS for the Case of an Infinitesimally Thin Beam 16

2.3.2 TFS with Variable Spatial Averaging 19

2.3.3 TFS with a Combined Spatial and Temporal Averaging 21

2.3.4 Discussion on the Layer Model 23

2.3.5 Conclusions on the Previous State of TFS 27

3 Transmission Fluctuations in Case of a Particle Monolayer **29**

3.1 Introduction 29

3.2 Mathematical Formulation and Solution for the Case of a Gaussian Beam Combined with Temporal Averaging in the Time Domain 30

3.2.1 Spatial Averaging Produced by a Gaussian Beam 30

3.2.2 Combined Temporal Averaging of the Transmission Signal in the Time Domain and Spatial Averaging in a Gaussian Beam 31

3.2.2.1 The Solution of $\langle Z3a \rangle$ 35

3.2.2.2 The Monolayer Structure 36

3.2.2.3 The Solution of $\langle Z3b \rangle$ 38

3.2.2.4 Final Solution for the ETS through the Monolayer 40

3.3 Solution for the Case of a Gaussian Beam Combined with Temporal Averaging in the Frequency Domain 40

3.4 Factorization of the Transition Function 42

3.4.1 Another Understanding of Spatial and Temporal Averaging 42

3.4.2 Factorization of the Transition Function 43

3.5 Special Cases 44

3.5.1 Temporal Averaging within an Infinitesimally Thin Beam 45

3.5.2 Spatial Averaging with Beams of Finite Diameters 48

3.5.3 Combined Spatial and Temporal Averaging in a Gaussian Beam and with Signal Filtering in the Frequency Domain 50

3.6 Discussions on the Effects of the Monolayer Structure 53

3.7 Conclusions 56

4 Particle Analysis by TFS in Dilute Suspensions 58

4.1. Modeling of the Transmission Fluctuation Measurements of a 3-Dimensional Suspension 58

4.2. Experimental Scheme and Electronics 61

4.3. The Inversion Algorithm 62

4.3.1. The Chahine Iteration 63

4.3.2. The Convergence of the Chahine Iteration 65

4.3.3. The Chahine Iteration with Increasing Resolutions and Other Methods 68

4.4. Experimental Results and Discussion 69

4.4.1. Experiments on a Monomodal PSD 70

4.4.2. Volume Concentrations by TFS 76

4.4.3. Experiments on a Bimodal PSD 77

4.4.4. Discussion on the Effect of Diffraction 79
4.5. Conclusion 79
5 Effects of Particle Overlapping in TFS Measurements 81
5.1 Introduction of the Effects from High Concentrations 81
5.2 Effects of Particle Overlapping 86
5.2.1 Formulations of the ETS through a 2-Layer Suspension 86
5.2.2 Extension to a *N*-Layer Suspension 91
5.2.3 Discussion on Special Cases of Particle Overlapping 92
5.2.4 Deviation of the Transition Function Resulting from Particle Overlapping 95
5.3 Estimation of Particle Overlapping 96
5.4 Conclusions 99
6 Simulations on the High Concentration Effects 100
6.1 Introduction 100
6.2 Simulations on the Monolayer Structure 101
6.2.1 Outline of the Simulation 101
6.2.2 Simulated Results on Monolayers Irradiated by an Infinitesimally Thin Beam 105
6.2.3 Simulated Results on Monolayers Illuminated by a Beam with Finite Diameter 107
6.3 Simulations on Particle Overlapping 108
6.3.1 Simulations with an Infinitesimally Thin Beam 109
6.3.2 Simulations with Beams of Finite Diameters 112
6.4 Simulations of the High Concentration Effects Combining Particle Overlapping and Monolayer Structure 116
6.4.1 Simulations with an Infinitesimally Narrow Beam 117
6.4.2 Simulations with a Parallel Circular Uniform Beam 119
6.4.3 Simulations with a Focussed Gaussian Beam 124
6.5 Conclusions 128
6.6 Discussion 130

7 Particle Size Analysis by TFS in Concentrated Suspensions 132

7.1 Empirical Correction from Measurements 133

7.1.1 Step Height of the Transition Function 134

7.1.2 Frequency Response of the Transition Function 139

7.1.3 Module of the Deviation 139

7.1.4 Conclusions on the Empirical Correction 142

7.2 High Concentration Correction in the Inversion Algorithm 143

7.3 Experimental Results on Monomodal Suspensions 146

7.3.1 Particle Size Distribution 146

7.3.2 Particle Concentration 153

7.4 Measurements on Bimodal Suspensions 156

7.5 Conclusions 161

8 General Conclusions and Perspectives 163

8.1 General Conclusions 163

8.2 Perspectives 164

9 Appendix 1 TFS of a Polydisperse Monolayer 167

A.1 Formulation 167

A.2 Discussion 171

10 Appendix 2 Nomenclature 173
