ABBREVIATIONS VI

SUMMARY 1

1. INTRODUCTION **3**

1.1 Regulation of gene expression by oxygen 3

1.1.1 Oxygen gradients and metabolic zonation of the liver 5

1.1.2 Regulation of zonated gene expression by normoxia 6

1.1.3 Regulation of zonated gene expression by hypoxia 8

1.2 Regulation of tyrosine aminotransferase (TAT) and serine dehydratase (SerDH) gene expression 9

1.2.1 Tyrosine aminotransferase 9

1.2.2 Serine dehydratase 11

1.3 Aim of the study 13

2. MATERIALS **14**

2.1 Animals 14

2.2 Bacterial and yeast strains, vectors and plasmid constructs 14

2.2.1 Bacterial and yeast strains 14

2.2.2 Vectors 14

2.2.3 The pGL3 basic and pGL3 promoter plasmid constructs 17

2.2.4 MATCHMAKER one hybrid system vector 23

2.3 Rat liver MATCHMAKER cDNA library 23

2.4 Oligonucleotides 25

2.4.1 Oligonucleotides for sequencing of the plasmides 25

2.4.2 Oligonucleotides for Electrophoretic Mobility Shift Assay (EMSA) 26

2.4.3 Oligonucleotides for PCR reaction 26

2.4.4 Oligonucleotides for pGl3-NRE construction 26

2.5 Digoxigenin-labeled RNA probes 27

2.6 Antibodies 28

2.7 Enzymes 28

2.8 Detection, purification and synthesis systems ("Kits") 32

2.9 Stock solutions 32

2.10 Chemicals 34

2.11 Other materials 37

2.12 Instruments 37

3. METHODS **40**

3.1 Cell biological methods 40

3.1.1 Isolation of primary rat hepatocytes 40

Liver perfusion 40

Preparation of the hepatocyte suspension 40
3.1.2 Primary rat hepatocytes culture 42
3.1.3 Culture of HepG2 and HeLa cells 43
3.1.4 Harvesting of hepatocytes, HepG2 and HeLa cells 44
3.1.5 Induction experiments in hepatocytes 45
3.2 Molecular biological methods 45
3.2.1 cDNA synthesis 45
3.2.2 Polymerase chain reaction (PCR) 46
3.2.3 TOPO cloning of PCR products 49
3.2.4 Cloning of the synthetically synthesized double stranded oligonucleotides into the plasmid pGl3 prom 50
Preparation of oligonucleotides for the ligation in a plasmid 50
Preparation of the pGl3 promoter vector for ligation 51
Ligation of the oligonucleotides into the plasmid pGl3 prom 52
Preparation of competent E. coli cells with one step method 53
Transformation of E. coli with the ligation mixture 54
3.2.5 Isolation and analysis of plasmid DNA (minipreparation) 55
3.2.6 Isolation and analysis of plasmid DNA with silicate columns (Maxipreparation) 57
3.2.7 Sequencing of plasmids 58
3.2.8 Transfection of hepatocytes, HeLa and HepG2 cells 59
3.2.9 Luciferase detection 60
3.2.10 Preparation of digoxigenin-labeled TAT and SerDH RNA probes 61
Linearization of the plasmids 61
In vitro transcription 62
Estimation of the labeling efficiency 62
3.2.11 RNA isolation from primary rat hepatocytes 63
3.2.12 Northern blot analysis 65
Denaturation of the RNA 65
Electrophoresis conditions 66
Visualization of the RNA with ethidium bromide 66
RNA transfer to nylon membranes 66
Hybridization of the RNA with digoxigenin-labeled RNA probes 67
Detection and quantification 67
3.2.13 Electrophoretic mobility shift assay 69
Preparation of probes for analysis of DNA-protein binding 69
5'-end labeling of DNA probes by T4 polynucleotide kinase 69
Preparation of nuclear extracts from primary hepatocytes and HepG2 cells 70
Measurement of protein concentration by Bradford method 72
Electrophoretic mobility shift assay 73
3.3 Yeast one hybrid assay 75
3.3.1 Integration of the target-reporter construct into the yeast genome 76
Preparation of pHISi-NRE target-reporter construct 76
Linearization of the target-reporter vector 76
Small-scale yeast transformation 76

Testing new reporter strain for background expression 79
3.3.2 Amplification of the AD fusion library and purification of the library DNA 79
Plasmid library titering 79
Plasmid library amplification 80
Isolation and analysis of the plasmid DNA (gigapreparation) 80
3.3.3 Screening of the AD fusion library using the modified yeast reporter strain 81
3.3.4 Isolation of plasmid from yeast 82
3.4 Security measures 83

4. RESULTS 84

4.1 Normoxia-dependent induction of SerDH and TAT mRNA expression 84
4.1.1 Induction of TAT mRNA expression under normoxia and its modulation by dexamethasone 84
4.1.2 Induction of SerDH mRNA expression by glucagon and its modulation by oxygen 84
4.2 Regulation of TAT and SerDH promoter luciferase gene constructs by oxygen 87
4.2.1 Sequence analysis of the rat TAT and SerDH promoters 87
4.2.2 Regulation of TAT promoter luciferase gene constructs by oxygen, dexamethasone and glucagon 88
4.2.3 Regulation of SerDH promoter luciferase gene constructs by oxygen 91
4.3 Induction of the TAT and SerDH NRE enhancer Luc gene constructs by normoxia 92
4.3.1 Induction of the TAT NRE enhancer Luc gene constructs by normoxia 92
4.3.2 Induction of the SerDH NRE enhancer Luc gene constructs by normoxia 95
4.4 Binding of an oxygen-inducible complex to NRE sequences of the TAT and SerDH promoters 98
4.5 Identification of putative NRE-binding proteins by MATCHMAKER one hybrid system experiments 102

5. DISCUSSION 103

5.1 Zonation and regulation of tyrosine aminotransferase (TAT) and serine dehydratase (SerDH) gene expression: control by hormones and oxygen 103
5.1.1 Hormone gradients 104
5.1.2 Oxygen gradients 106
5.2 O_2-dependent regulation of gene expression: a common phenomenon 107
5.2.1 O_2 regulatory elements and transcription factors 108
Characterization of the normoxia responsive elements 108
Normoxia inducible factors 110
Hypoxia-inducible factors and hypoxia responsive elements 111
5.3 Candidate transcription factors functioning as NRE binding proteins 113
5.4 The first steps in the normoxia-dependent gene regulation 114
Literature 116
