Abstract (German)	ix
Publications	xiii
1 Motivation	1
2 Fundamental concepts for the generation of ultrashort laser pulses	9
2.1 Interaction of an electromagnetic field with matter	9
2.2 Laser fundamentals	11
2.2.1 Rate-equations	11
2.2.2 Basic laser dynamics	14
2.3 Dispersion – consequences and compensation	17
2.3.1 Origin of dispersion	17
2.3.2 Nonlinear pulse propagation	18
2.3.3 Dispersion compensation	21
2.4 Mode locking	27
2.4.1 Formation of ultrashort laser pulses	27
2.4.2 Mode locking mechanisms	29
2.4.3 Theoretical description – the Master Equation of Mode locking . .	31
2.4.4 Kerr-lens mode locking	38
3 The two-foci 5.0 fs Titanium-Sapphire laser	41
3.1 New double-chirped mirror pairs	41
3.2 A second intracavity focus to enhance SPM	44
3.3 Dispersion management	46
3.4 Resonator design	48
3.4.1 Geometrical arrangement of the resonator elements	48
3.4.2 Eigenmode analysis of the resonator	50
3.4.3 Adaptation of the pump beam	52
3.4.4 Output coupler design	53
3.4.5 Simulation of dispersion-managed mode locking dynamics	54
3.5 Results	56
3.5.1 Octave-spanning spectrum	56
3.5.2 Autocorrelation measurement	58

3.6	Summary	61
4	Phase sensitive nonlinear optics and carrier-envelope phase detection	65
4.1	Metrology, optical clock standards and nonlinear optics - the impact of carrier-envelope phase control	65
4.2	Theoretical description	67
4.2.1	Definition	67
4.2.2	Origin of the pulse-to-pulse phase variation $\Delta\phi$	68
4.3	Measurement techniques	71
4.3.1	Crosscorrelation – preliminary measurements	71
4.3.2	Interference of harmonics	73
4.4	Nonlinear optical experiments for carrier-envelope phase-slip detection	75
4.4.1	Interference of second- and third harmonic	75
4.4.2	Interference of fundamental with second harmonic	79
4.5	Noise and stabilization	81
4.5.1	Noise	81
4.5.2	Active electronic stabilization	82
4.6	Detection of coherence properties of synchronized lasers	83
4.6.1	All-optical passive synchronization	84
4.6.2	Coherence of synchronized lasers	87
4.6.3	Detection principle	87
4.6.4	Experiments on synchronization and CEO detection	89
4.7	Summary	91
5	Pulse characterization	93
5.1	General aspects of ultrashort pulse characterization	93
5.2	Spectral Phase Interferometry for Direct Electric field Reconstruction (SPIDER)	95
5.2.1	Generation of the SPIDER interferogram	96
5.2.2	Phase reconstruction	98
5.3	Design and setup of the SPIDER apparatus	100
5.4	SPIDER-calibration	101
5.5	Dispersion measurements with SPIDER	105
5.6	Characterization of Ti:sapphire 4.8 fs pulses	106
5.7	Characterization of $\text{Cr}^{3+}:\text{LiCAF}$ 9.3 fs pulses	109
5.8	Summary	110
6	Conclusion and Outlook	113
A	Interaction of a two-level system with a light field – the Bloch-Equations	117
A.1	Two-Level Model	117
A.2	Bloch-Equations	122
A.3	Derivation of the Rate-Equations	123

B Parameters of common laser materials	129
C Interferometric autocorrelation measurement	131
Nomenclature	135
Bibliography	142
Acknowledgements (German)	163
