1	Introduction	1
1.1	Problem Statement	2
1.2	Main Contributions	3
1.3	Chapter Overview	4
2	Background	5
2.1	Materials	5
2.1.1	Classification I – Opacity	5
2.1.2	Classification II – Surface Structure	7
2.1.3	Hierarchy of Detail	9
2.2	Radiometry	10
2.2.1	Basic Terms	11
2.2.2	Bidirectional Reflectance Distribution Function	12
2.2.3	Rendering Equation	16
2.3	Rendering Techniques	16
2.3.1	Accurate Solutions of the Rendering Equation	16
2.3.2	Approximate Solutions of the Rendering Equation	17
2.3.3	Displaying the Solutions	20
2.4	Hardware Rendering Pipeline	21
2.4.1	Geometry Processing	22
2.4.2	Rasterization	24
2.4.3	Per-Fragment Operations	26
2.4.4	Framebuffer	26
2.4.5	Per-Pixel vs. Per-Vertex	27
2.4.6	Summary	27
3	Related Work	29
3.1	Reflectance Models	29
3.1.1	Diffuse and Glossy Reflectance	29
3.1.2	Phong-Based Models	31
3.1.3	Microfacet Models	33

3.1.4	Anisotropic Models	35
3.1.5	Tabulated Models	36
3.2	Real-Time Rendering	36
3.2.1	BRDF Rendering	37
3.2.2	Bump Mapping	37
3.2.3	Environment Mapping	38
3.2.4	Glossy Reflections	40
3.2.5	Shadowing Techniques	40
3.2.6	Precomputed Transfer	41
3.3	Image-Based Rendering	42
3.3.1	Light Field	42
3.3.2	Reflectance Field	43
3.3.3	Scene Relighting	43
3.3.4	Warping-Based Methods	44
3.3.5	Image-Based Objects	45
3.4	Spherical Harmonics for Shading	45
3.5	Displacement Mapping	46
4	Problem Classification	47
4.1	Local Illumination	47
4.2	Global Illumination	47
4.3	Material Detail	48
4.4	Classification of Techniques	48
I	Local Illumination	53
5	Bump Mapping with Anisotropic Shift-Variant BRDFs	55
5.1	Introduction	55
5.2	Mapping Reflectance Models to Graphics Hardware	56
5.2.1	Banks Model	58
5.2.2	Anisotropic Blinn-Phong Model	59
5.2.3	Ward's Model	60
5.2.4	Other Models	61
5.3	Rendering	61
5.3.1	Fragment Shaders	62
5.3.2	Imaging Subset	63
5.4	Hardware Issues	64
5.4.1	Discussion	65
5.5	Results	66
5.6	Discussion	68

6	Bump Map Shadows	71
6.1	Overview	71
6.2	Precomputation	72
6.3	Shadow Test Using Graphics Hardware	73
6.4	Rendering using Fragment Shaders	74
6.4.1	Pre-Squaring the Data	74
6.4.2	Algorithm	75
6.4.3	Algorithm for Antialiased Shadow Boundaries	75
6.5	Results	76
6.6	Discussion	76
II	Global Illumination	79
7	Classification: Environment Mapping Techniques	81
7.1	Introduction	81
7.2	General Prefiltered Environment Maps	82
7.3	Classification of Known Techniques	82
7.3.1	Diffuse Environment Maps	82
7.3.2	Specular Environment Maps	83
7.3.3	Phong Environment Maps	84
7.3.4	Environment Maps with Isotropic BRDFs – I	84
7.3.5	Environment Maps with Lafortune BRDF	86
7.3.6	Environment Maps with Isotropic BRDFs – II	87
7.3.7	Environment Maps with Isotropic BRDFs – III	88
7.4	Discussion	88
8	Fast Environment Map Filtering for Glossy Materials	91
8.1	Overview	91
8.2	Hierarchical Prefiltering	91
8.2.1	Results	94
8.3	Hardware Accelerated Filtering	95
8.3.1	Algorithm	96
8.3.2	Results	97
8.4	Discussion	98
9	Arbitrary BRDF Shading Using Spherical Harmonics	101
9.1	Introduction	101
9.2	Accelerated Shading with Spherical Harmonics	102
9.2.1	Calculating BRDF Coefficients	104
9.2.2	Calculating Lighting Coefficients	104

9.3	Rendering	105
9.4	Results	106
9.5	Discussion	108
10	Precomputed Radiance Transfer	111
10.1	Introduction	111
10.2	Overview	113
10.3	Precomputed Radiance Transfer	113
10.3.1	Diffuse Transfer	115
10.3.2	Glossy Transfer	117
10.3.3	Limitations and Discussion	119
10.4	Precomputation of Radiance Transfer	120
10.5	Rendering with Precomputed Radiance Transfer	122
10.5.1	Surfaces	122
10.5.2	Volumes	123
10.5.3	Bump Maps	125
10.5.4	Spatial Sampling of the Incident Radiance Field	126
10.5.5	Sampling SH Radiance on Graphics Hardware	127
10.6	Results	127
10.7	Discussion	129
III	Material Detail	133
11	Displacement Mapping	135
11.1	Overview	135
11.2	Displacement Mapping	137
11.2.1	General	137
11.2.2	Basic Hardware Accelerated Method	137
11.2.3	Orthogonal Slicing	139
11.2.4	Screen-Space Slicing	141
11.2.5	Comparison of Different Slicing Methods	143
11.3	Image Based Depth Objects	143
11.3.1	Rendering	144
11.3.2	Texture Mapping	146
11.4	Image Based Visual Hull	146
11.5	Results	147
11.6	Discussion	148

12	Conclusions and Future Work	151
12.1	Summary	151
12.1.1	Local Illumination	152
12.1.2	Global Illumination	152
12.1.3	Material Detail	153
12.2	Graphics Hardware vs. Ray-Tracing	153
12.3	Conclusions and Future Work	154
	Bibliography	155
A	Review of Spherical Harmonics	175
A.1	Definition	175
A.2	Projection and Reconstruction	177
A.3	Convolution	178
A.4	Rotation	178
A.5	Specific Properties	179
A.5.1	Projection of a Product Integral	179
A.5.2	Product Projection	179
A.5.3	Rotational Invariance	179
