Contents

Preface	ix
Abstract	xv
Zusammenfassung	xvii
1. Introduction	1
1.1 Sources of astrophysical information	1
1.2 The role of the Sun in astrophysics	2
1.3 Description of polarized radiation	3
1.3.1 Stokes formalism	4
1.3.2 Mueller calculus	4
1.4 Origin of polarized radiation	5
1.4.1 Zeeman effect	5
1.4.2 Coherent scattering	8
1.4.3 Hanle effect	11
1.5 Radiative transfer	15
1.5.1 Radiative transfer equation	15
1.5.2 Frequency redistribution	16
1.5.3 Formulation of coherent scattering	18
1.5.4 Numerical techniques	21
1.6 Outline of the thesis	23
Bibliography	25
2. Continuum polarization in the solar spectrum	29
2.1 Introduction	30
2.2 Theoretical approach	31
2.2.1 Physical processes involved	31

2.2.2	Formulation of the transfer problem for polarized radiation	32
2.2.3	Numerical technique	33
2.2.4	Solar model atmospheres considered	34
2.3	Tests of the computer code	36
2.3.1	Purely scattering atmosphere	36
2.3.2	Comparison with observed limb darkening	37
2.4	Behavior of the continuum polarization	38
2.4.1	Wavelength dependence	40
2.4.2	Sources of model dependence	43
2.5	Analytical representation	46
2.5.1	Analytical function	46
2.5.2	Wavelength dependence of m_λ	49
2.5.3	Wavelength dependence of q_λ	49
2.5.4	CLV curves	50
2.6	Conclusions	50
	Bibliography	53
3.	Depolarizing lines in the Sun's spectrum	55
3.1	Introduction	56
3.2	Modeling depolarization	57
3.2.1	Transfer equation	57
3.2.2	Line opacity	60
3.2.3	Numerical method	60
3.3	Lines without intrinsic polarization	61
3.3.1	Parameter survey	62
3.3.2	Interpretation	65
3.4	Lines with intrinsic polarization	72
3.4.1	Atomic data for Fe I	72
3.4.2	Coupling of line and continuum polarization	73
3.5	Conclusions	77
	Bibliography	81
4.	Radiative Transfer in Na I D₂ and D₁	85
4.1	Introduction	85
4.2	Numerical Method	86

4.3	Results	87
4.3.1	Influence of Elastic Collisions	87
4.3.2	Influence of Hyperfine-Structure and Lower-Level Polarization	89
4.4	Conclusions	91
	Bibliography	93
	5. PALI method for Hanle effect with PRD	95
5.1	Introduction	96
5.2	Formulation of the radiative transfer problem	99
5.2.1	Assumptions	99
5.2.2	Polarized line transfer equation for Hanle effect	100
5.2.3	Redistribution matrix and the domain structure	101
5.2.4	Irreducible transfer equation in Fourier space	106
5.2.5	Discussion on the irreducible transfer equation	109
5.3	The numerical method of solution	110
5.3.1	The generalized PALI method	110
5.3.2	Estimation of source vector corrections	112
5.3.3	Convergence criterion	117
5.4	Testing the generalized PALI method	118
5.4.1	Convergence characteristics	118
5.4.2	Comparison with other numerical methods	121
5.4.3	Flux conservation test	124
5.5	Conclusions	128
	Bibliography	131
	6. Outlook: Future developments	137
	Bibliography	139
	Curriculum Vitae	141
