Contents

I. General introduction 1

1. Problem setting 1
2. Structure of the study and objectives of the separate steps 7

II. Application of the Life Cycle Assessment methodology to agricultural production: an example of sugar beet production with different forms of nitrogen fertilizers 13

Abstract 13
1. Introduction 14
2. Materials and methods 14
3. Results and discussion 22
4. Conclusions 27

III. Methods to estimate on-field nitrogen emissions from crop production as input to LCA studies in the agricultural sector 31

Abstract 31
1. Introduction 31
2. Ammonia volatilization 33
3. Nitrous oxide emissions 38
4. Nitrate leaching 40
5. Example 44
6. Comparison of the methods to others used in recent LCA studies 46
7. Conclusions 48

IV. Impact Assessment of Abiotic Resource Consumption - Conceptual Considerations - 51

Abstract 51
1. Introduction 51
2. Impact assessment of the consumption of abiotic resources 52
3. Example of use: Application of the proposed approach to a wheat production system and comparison to the CML method 58
4. Discussion and conclusions 61
5. Annex 64

V. Life Cycle Impact Assessment of land use based on the Hemeroby concept 67

Abstract 67
1. Introduction 68
2. The resource “naturalness” 69
3. The Hemeroby concept 70
4. Impact assessment of different land use types 73
5. Discussion and conclusions 78

6. Annex 82

VI. Investigation of the Environmental Impact of Agricultural Crop Production using the Life Cycle Assessment (LCA) Methodology I. Development of a LCA method tailored to agricultural crop production 85

Abstract 85
1. Introduction 85
2. General introduction of the Life Cycle Assessment (LCA) methodology 87
3. Life cycle impact assessment tailored to plant nutrition in agricultural crop production 90
4. Discussion and conclusions 107
5. Acknowledgements 109

VII. Investigation of the Environmental Impact of Agricultural Crop Production using the Life Cycle Assessment (LCA) Methodology II. Application of the LCA methodology to investigate the environmental impact of different N fertilizer rates in cereal production 111

Abstract 111
1. Introduction 112
2. Materials and methods 113
3. Results and discussion 119
4. Discussion and conclusions 134

VIII. Discussion and conclusions 137

1. Application of the LCA methodology to investigate the environmental impacts of arable crop production 137
2. Methodological developments to adjust LCA to the requirements of arable crop production 139
3. Application of the new LCA method to investigate the environmental impacts of different nitrogen fertilizer rates 151
4. Concluding remarks 153

IX. Summary 154

X. References 157

XI. Annex 171

Basic data for LCA studies on arable crop production 171
