Abstract	ix
Résumé	xi
1 Introduction	1
1.1 General Overview	1
1.2 The Solar Corona	2
1.2.1 A Highly Structured Medium	3
1.2.2 The Generation of Magnetic Fields – the Solar Dynamo	4
1.3 Stellar Activity	5
1.3.1 Relation of Activity to Rotation and Age	7
1.4 Coronal Heating of Magnetically Active Stars	8
1.4.1 High-Energy Processes – Flares	10
1.5 Coronal Abundances in the Sun and Stars	12
1.5.1 Models for the First Ionization Potential Effect	14
1.6 Overview of the Thesis	17
2 Instrumental Aspects	19
2.1 The Extreme Ultraviolet Explorer	19
2.1.1 Scientific Payload	20
2.1.1.1 The Sky Survey Instruments	20
2.1.1.2 The Deep Survey Instrument	20

2.1.1.3	The Spectrometer	21
2.2	The XMM-Newton Observatory	22
2.2.1	The European Photon Imaging Cameras	22
2.2.2	The Reflection Grating Spectrometers	26
2.2.3	The Optical Monitor	28
I	Flare Statistics in Active Stars	31
3	Investigation of Flare Statistics in Two Young Solar Analogs: A Pilot Study	33
3.1	Introduction	33
3.2	Observations and Data Reduction	34
3.3	Analysis Methods and Results	35
3.4	Discussion and Conclusions	40
4	Extreme-Ultraviolet Flare Activity in Late-Type Stars	43
4.1	Introduction	44
4.2	Data Selection and Reduction	45
4.3	Flare Occurrence Rate Distributions	51
4.4	Fits to the Distributions	53
4.4.1	Cumulative Distributions	53
4.4.2	Differential Distributions	55
4.4.2.1	Combined Data Sets	55
4.5	Correlations with Physical Parameters	56
4.5.1	Correlations of the Power-Law Index α	57
4.5.1.1	Coronal Luminosity L_X	57
4.5.1.2	Ratio L_X/L_{bol}	57
4.5.1.3	Rotation Period P	58
4.5.1.4	Projected Rotational Velocity $v \sin i$	58
4.5.1.5	Rossby Number R_0	58

4.5.2	Correlations of the Flare Occurrence Rate	58
4.5.2.1	Flare Rate vs. L_X	58
4.5.2.2	Normalized Flare Rate vs. L_X/L_{bol}	59
4.5.2.3	Normalized Flare Rate vs. Normalized $v \sin i$	61
4.5.2.4	Normalized Flare Rate vs. R_0	62
4.5.3	Flare Power vs. L_X	62
4.6	Discussion and Conclusions	63
5	Extreme Ultraviolet and X-Ray Flare Statistics for AD Leo	69
5.1	Introduction	69
5.2	Data Selection and Reduction	70
5.3	Analysis	73
5.3.1	Method 1: Count Rate Distributions	73
5.3.2	Method 2: Analysis of Photon Arrival Time Differences	76
5.4	Results	76
5.4.1	The Power-Law Indices	76
5.4.2	The Minimum Flare Energies and Quiescent Emission	78
5.5	Conclusions	81
II	High-Resolution X-Ray Spectroscopy	83
6	Flare Heating in the Coronae of HR 1099	85
6.1	Introduction	85
6.2	Data Reduction and Analysis	88
6.3	Results	89
6.3.1	Rotational Modulation	89
6.3.2	Time-Dependent Spectroscopy	91
6.4	Discussion and Conclusions	94

7	High-Resolution X-Ray Spectroscopy of Capella	97
7.1	Introduction	97
7.2	Previous Knowledge on Capella	98
7.3	Data Reduction and Analysis	99
7.3.1	Line Fluxes	99
7.3.2	Working Procedure	100
7.3.3	Elemental Abundances	101
7.3.4	Emission Measure Distribution	103
7.3.5	He-like Ions	103
7.3.6	Dielectronic Recombination Satellite Lines	105
7.4	Discussion and Conclusions	106
8	X-Ray Spectroscopy of AB Doradus	109
8.1	Introduction	109
8.2	Observations and Data Analysis	110
8.3	Densities From the RGS	114
8.4	Time-Resolved Spectroscopy	116
8.4.1	The Quiescent Spectrum	116
8.4.2	The Flare Spectra	119
8.5	Flare Decay Analysis	121
8.6	Conclusions	122
9	Coronal Structure in the Castor X-Ray Triplet	123
9.1	Introduction	123
9.2	The Castor System: Previous Knowledge	124
9.3	Observations and Data Analysis	126
9.4	Results	126
9.4.1	X-Ray Images and Light Curves of YY Gem and Castor AB	126
9.4.2	The RGS Spectra, and Density Analysis	126
9.4.3	Thermal Structure and Abundances	127

9.4.4	Orbital Motion of YY Gem	133
9.4.5	An Eclipsed Flare?	134
9.5	Eclipse Modeling	134
9.6	Summary and Conclusions	137
10	Elemental Abundances in Stellar Coronae with XMM-Newton	139
10.1	Introduction	139
10.2	Targets and Observations	140
10.2.1	Solar Analogs	140
10.2.2	RS CVn Binary Systems	141
10.3	Analysis	144
10.4	Results	145
10.5	Discussion and Conclusions	149
11	Outlook	151
	Bibliography	153
	Curriculum Vitae	163
	List of Publications	165
