Contents

1 State of the art **1**

1.1 Rods . . . 2

1.1.1 End-pumped rods . . . 2

1.1.2 Side-pumped rods . . . 2

1.2 Slabs . . . 3

1.2.1 End-pumped slabs . . . 3

1.2.2 Side-pumped slabs . . . 4

1.3 Disks . . . 4

1.4 Fibers . . . 5

1.5 Concept comparison . . . 5

2 Optimized pumping of Nd:YVO_4 **7**

2.1 Nd:YVO_4. *A gifted laser material* . . . 7

2.1.1 Physical structure . . . 8

2.1.2 Spectroscopic properties . . . 10

2.1.3 Heat generation . . . 15

2.1.4 Thermo-optical and mechanical properties . . . 22

2.2 End pumping. *High optical efficiency and high beam quality* . . . 24

2.2.1 Pump–mode matching . . . 24

2.2.2 Thermal lensing . . . 26

2.2.3 Crystal stress and fracture . . . 29

2.3 888 nm pumping of Nd:YVO_4. *The road to high power* . . . 30

2.3.1 Limitations of 808 nm pumping . . . 30

2.3.2 Absorption at 888 nm . . . 31

2.3.3 Pump absorption, inversion, and gain . . . 32

2.3.4 Energy-transfer upconversion . . . 38

2.3.5 Finite element analysis . . . 42

3 Continuous wave oscillation **49**

3.1 Multimode resonator . . . 49

3.1.1 Crystals . . . 49

3.1.2 Diodes . . . 52

3.1.3 Multi-transversal-mode oscillator . . . 56

3.2 TEM_{00} resonators . . . 62
3.2.1 Resonator design . . . 62
3.2.2 TEM_{00} dynamically-stable resonator . . . 66
3.2.3 Periodic resonator . . . 69
3.3 Single-pass amplifier . . . 71
3.3.1 Principle . . . 72
3.3.2 Single-pass CW amplifier . . . 74
3.4 Intracavity-doubled resonator . . . 76
3.4.1 Second harmonic generation . . . 77
3.4.2 Intracavity doubling . . . 87
3.4.3 Intracavity-doubled TEM_{00} resonators . . . 88
3.5 CW performance summary . . . 91

4 Nanosecond pulse operation **95**
4.1 Q-switching . . . 96
4.1.1 Principle . . . 96
4.1.2 Simulations . . . 99
4.1.3 Q-switch technologies . . . 102
4.1.4 Q-switched oscillator . . . 106
4.2 Cavity-dumped Q-switching . . . 109
4.2.1 Principle . . . 109
4.2.2 CDQS oscillator . . . 111
4.2.3 Stability . . . 114
4.2.4 Second harmonic generation . . . 117
4.3 Comparison . . . 118

5 Picosecond pulse operation **121**
5.1 Theory of passive mode locking . . . 121
5.1.1 Principle of mode locking . . . 121
5.1.2 Active mode locking . . . 123
5.1.3 Passive mode locking . . . 124
5.1.4 The semiconductor saturable-absorber mirror . . . 126
5.2 Mode-locked oscillator with a saturable absorber mirror . . . 129
5.2.1 Mode-locked oscillator design . . . 129
5.2.2 Mode-locked oscillator performance . . . 131
5.2.3 Mode-locked MOPA . . . 134
5.3 Harmonic generation . . . 134
5.3.1 Frequency doubling . . . 135
5.3.2 Frequency tripling . . . 136
5.4 Picosecond performance summary . . . 139

6 Summary **141**

Bibliography **145**
