Summary	i
Zusammenfassung	iii
Acknowledgements	v
List of Table	viii
List of Figure	xi
Appendice	xii
Chapter I. General Introduction	1
Rodents	1
The Norway Rat	2
Biology	2
Feeding Behaviour	3
Exploratory Behaviour	4
Aggressive Behaviour	5
Problems in Rodent Control	5
Objectives of the Study	7
Chapter II. Feeding Preference and Rodenticides Acceptance	9
Introduction	9
Objectives	10
Methods	10
General conditions at the farms	10
Bait Acceptance Tests	10
Results	14
Experiment 1. Feed preference test	14
(a) Choice test	14
(b) No-choice test	16
Experiment 2. Feeding responses of rats to cereals	17
Experiment 3. Palatability of pelleted versus ground feed	19
Experiment 4. Feeding responses of rats to typical feed available at farm	20
Comparison of consumption of feed and altromin pellets	20
Experiment 5. Feeding responses of rats to attractants	23
Pre-test	23
1. Granulated-sugar	23
2. Vanilla-sugar	23
3. Egg	23
Feeding response test using attractants	23
Differences in attractants consumption	25
Effect of sex and weight on feed/bait consumption	25

Experiment 6. Rodenticide palatability test	27
Effect of the area of rat's origin	31
Comparison of laboratory and field results	32
Discussion	33
Chapter III. Neophobic Behaviour	44
Introduction	44
Objectives	45
Methods	45
Experiment 1. Neophobic behaviour test in groups of rats	45
1.1. Pre-test	45
1.2. Actual test	45
Experiment 2. Neophobic behaviour test in individual rats	47
2A. Individual test using the same feed (rolled oats)	47
2B. Individual test using different feed (rolled oats and oats)	47
2C. Comparison of response of rats from farm no. 3 and 4	47
The conditions at the farms	47
Results	48
Experiment 1. Neophobic behaviour test in groups of rats	48
Pre-test	48
Actual test	48
Experiment 2. Neophobic behaviour test in individual rats	50
2A. Individual test using the same feed (rolled oats)	50
2B. Individual test using different feed (rolled oats and oats)	52
2C. Comparison of response of rats from farm no. 3 and 4	54
Rank of neophobic behaviour	56
Effect of the time interval between two trials on the feed consumption and time spent in the box	57
Effect of adaptation time on the feed consumption and time spent in the box	58
Discussion	59
Chapter IV. General Discussion	67
Testing methods	68
Feed and rodenticide acceptance	69
Neophobic behaviour	71
Factors influencing neophobic behaviour in Norway rats	72
1. Social factor	72
2. The natural variability of the food supply	72
3. Interaction with human	72
4. Variation in individual rats	73
5. Control activities	73
6. Pathogens	73
Conclusions	74
References	75
Appendice	85
Curriculum Vitae	88

LIST OF TABLE

Number	TEXT	page
1.	Overview of the feed/bait acceptance experiments conducted in this study	12
2.	General conditions at the farms from where rats were taken for laboratory trials	14
3.	Palatability of Norway rats to some cereals (choice test)	15
4.	Palatability of Norway rats to four kinds of cereals (choice test)	15
5.	Palatability of Norway rats to some cereals (no-choice test)	16
6.	Consumption of cereals by Norway rats from different farms	18
7.	Consumption of altromin meal and pellets by Norway rats from different farms	19
8.	Consumption of typical feed available at the farm by Norway rats from different farms	21
9.	Comparison of consumption of different feed and altromin pellets by Norway rats	22
10.	Consumption of feed with different attractants by Norway rats from different farms	24
11.	Effect of some attractants on the consumption by Norway rats	25
12.	Consumption of 20 kinds of feed by Norway rats of different sex and body weight	26
13.	Rodenticide palatability in Norway rats (choice and no-choice test)	28
14.	Rodenticide palatability and acceptance in Norway rats (choice test)	28
15.	Rodenticide palatability in Norway rats (no-choice test)	30
16.	Rodenticide consumption by Norway rats from different farms	31
17.	Rodenticide palatability by Norway rats in the laboratory and in the field	32
18.	Consumption of feed and percentage of consumption by groups of rats in the neophobic test	48
19.	Total and percentage of time spent in the box by groups of rats in the neophobic test	49
20.	Mean time spent in the box and adaptation time by groups of rats in the neophobic test	49

21. Consumption of feed and percentage of consumption by individual rats using the same feed (rolled oats) in the neophobic test	51
22. Total and percentage time spent in the box by individual rats using the same feed (rolled oats) in the neophobic test	51
23. Mean time spent in the box and adaptation time by individual rats using the same feed (rolled oats) in the neophobic test	52
24. Consumption of feed and percentage of consumption by individual rats using different feed (rolled oats and oats) in the neophobic test	53
25. Total and percentage time spent in the box by individual rats using different feed (rolled oats and oats) in the neophobic test	53
26. Mean time spent in the box and adaptation time by individual rats using different feed (rolled oats and oats) in the neophobic test	54
27. Consumption of feed and percentage of consumption by individual rats from farm no. 3 and 4 in the neophobic test	55
28. Total and percentage time spent in the box by individual rats from farm no. 3 and 4 in the neophobic test	55
29. Mean time spent in the box and adaptation time by individual rats from farm no. 3 and 4 in the neophobic test	56
30. Responses of two rats from farm no. 4 (lower level of neophobic behaviour)	56
31. Results of neophobic behaviour tests and ranks of neophobia of rats from each farm	57
32. Effect of time interval between the two tests on the relative consumption and time spent in the box	58
33. Effect of the time interval between two tests on the relative consumption and time spent in the box of rats from different farms	58
34. Effect of adaptation time on the consumption and time spent in the box	59

APPENDICE

1. Nutritional content of altromin pellet as a standard diet for rats and mice	85
2. Consumption of altromin meal amended with granulated-sugar as attractant by Norway rats (pre-test, choice method)	85
3. Consumption of altromin meal amended with vanilla-sugar as attractant by Norway rats (pre-test, choice method)	85

4. Consumption of rolled oats amended with egg (10 %) as attractant by Norway rats (pre-test, choice method)	86
5. General conditions at the farms from where rats were taken for laboratory trials	86
