Contents

1 Introduction **1**

2 Overview **5**
2.1 Published methods 5
2.1.1 Wavelet methods for nonlinear optical pulse propagation 5
2.1.2 General wavelet methods for partial differential equations 7
2.2 Achievements of the present work 8

3 Nonlinear optical pulse propagation **10**
3.1 Maxwell's equations 10
3.2 Susceptibility tensors $\breve{\chi}^{(n)}$ 13
3.3 Scalar slowly varying envelopes 16
3.4 Wave equation in Fourier domain 19
3.5 Separation ansatz 22
3.6 Perturbed propagation constant $\beta'(\omega)$ 23
3.7 Approximation of constant refractive index n 25
3.8 Definition of envelope $a(t, z)$ and physical units 26
3.9 Slowly varying envelope approximation (SVEA) 27
3.10 Nonlinear Schrödinger equation (NLSE) 28
3.10.1 Transformation of variables 30
3.10.2 Influence of carrier frequency 31
3.10.3 Soliton solution 33
3.10.4 Higher-order nonlinear effects 34

4 Collocation method **36**
4.1 Method of weighted residuals 36
4.2 Collocation method 38

4.3 Split-step integration 40
4.4 Split-step collocation method (SSCM) 42
4.4.1 General basis 42
4.4.2 Harmonic basis, split-step Fourier method (SSFM) . 43
4.4.3 Gauss-Hermite basis 47
4.4.4 Rating of methods (SSCM vs. SSFM) 49
4.5 Split-step wavelet collocation method (SSWCM) 49
4.5.1 Calculation of the propagation operator $e^{\mathbf{L}h}$ 51
4.5.2 Complexity of the SSWCM 55

5 Multiresolution analysis (MRA) 56
5.1 Scaling function ϕ 56
5.2 Multiresolution analysis (MRA) 57
5.3 Wavelet ψ 59
5.3.1 Biorthogonal wavelets 62
5.3.2 Orthogonal wavelets 66
5.4 Representation of functions in space V_j 67
5.4.1 Projection operator P^j and series coefficients s_k^j . . 67
5.4.2 Projection operator Q^j and series coefficients d_k^j . . 68
5.4.3 Combined representation 69
5.4.4 Fast wavelet transform (FWT) 70
5.4.5 Inverse fast wavelet transform (IFWT) 71
5.4.6 Shifted vanishing moments and numerical quadrature 74
5.5 Representation of operators in space V_j 75
5.5.1 MRA operator standard form 77
5.5.2 MRA operator nonstandard form 81
5.5.3 Elements $T_{kk'}^j$ of the differential operator $\mathcal{T} = \mathrm{d}^\mu/\mathrm{d}x^\mu$ 86
5.5.4 Operator function $\mathcal{U} = f(\mathcal{T})$ 91
5.6 Interpolating wavelets (Deslaurier-Dubuc) 94
5.6.1 Interpolation procedure 94
5.6.2 Filter coefficients 95
5.6.3 FWT and IFWT 98
5.6.4 Scaling functions and wavelets 98
5.6.5 Elements of the differential operator $\mathcal{T} = \mathrm{d}^\mu/\mathrm{d}x^\mu$ . . 103
5.6.6 Numerical dispersion behavior of the differential operator $\mathcal{T} = \mathrm{d}^2/\mathrm{d}x^2$ 103
5.6.7 Nonstandard form of the operator function $\mathcal{U} = f(\mathcal{T})$ 105
5.7 Adaptive split-step multiresolution wavelet collocation method (SSMRWCM) 106

6 Implementation and results **108**
6.1 SSCM vs. SSFM (single impulse propagation) 108
6.2 SSWCM vs. SSFM 111
6.2.1 General case 111
6.2.2 Fixed accuracy (fixed complexity factor q) 112
6.2.3 Fixed window W 112
6.2.4 Rating of methods (SSWCM vs. SSFM) 113
6.3 WDM simulations 114
6.3.1 SSWCM vs. SSFM 115
6.3.2 Bit error rate and maximum spectral efficiency . . . 122
6.3.3 Channel-separated WDM simulations (C-SSWCM) . 143
6.4 SSMRWCM vs. SSFM 150

7 Summary and outlook **152**

A Orthogonal collocation **154**
A.1 Choice of collocation points 154
A.1.1 Gaussian quadrature 155
A.1.2 Approximation function $A(x)$ 157
A.2 Choice of basis functions 159
A.3 Matrices 161
A.3.1 Inversion of matrix $\mathbf{\Phi}$ 161
A.3.2 Gauss-Hermite basis functions 162

B Integration formulae **165**
B.1 Formal solution using exponential $\mathrm{e}^{h\mathcal{H}}$ 165
B.1.1 Integration $A(z+h) = \mathrm{e}^{h\mathcal{H}(z)}\, A(z)$ 167
B.1.2 Integration $A(z+h) = \mathrm{e}^{h\mathcal{H}(z+h/2)}\, A(z)$ 167
B.2 Splitting of the operator $\mathrm{e}^{(\mathcal{P}+\mathcal{Q})h}$ 169
B.2.1 Asymmetric splitting $\mathrm{e}^{\mathcal{P}h}\,\mathrm{e}^{\mathcal{Q}h}$ 169
B.2.2 Symmetric splitting $\mathrm{e}^{\mathcal{P}h/2}\,\mathrm{e}^{\mathcal{Q}h}\,\mathrm{e}^{\mathcal{P}h/2}$ 170

C Mathematical supplements **172**
C.1 Functions of matrices 172
C.1.1 Diagonal matrices 172
C.1.2 Identity matrix $\mathbf{I}$ 173
C.1.3 Similarity transformation 173
C.2 Harmonic analysis 174
C.2.1 Fourier series 174
C.2.2 Fourier integral 175
C.2.3 Discrete Fourier transform (DFT) 180

C.2.4 Group velocity 181
C.2.5 Chromatic dispersion and group delay dispersion . . 182
C.3 Perturbation theory 183
C.3.1 Eigenvalue problem 183
C.3.2 Perturbed operator 184
C.4 Error measure ε 188
C.5 Filter and operator coefficients 190
C.5.1 Biorthogonality relations 190
C.5.2 Nonstandard form of the operator function $\mathcal{U} = f(\mathcal{T})$ 193
