Contents

1 Model and Setting	1
1.1 Putting Practice into Theory	3
1.2 An Overview of the Results	6
1.3 The Structure of this Thesis	10
2 Optimal Bisectors	11
2.1 Focusing on Segments	11
2.1.1 An Overview of the Used Techniques . . .	13
2.1.2 Related Work	14
2.2 Properties of Optimal m -Cuts	16
2.3 Computing Optimal m -Cuts	24
2.4 Counting Segments and IFS Covering Sets	29
2.5 Generalisations and Faster Algorithms	42
3 Corner Cuts and their Applications	47
3.1 A Failed Attempt and a Solution by Detours . .	48
3.1.1 Related Work	52

3.2	Corner Cuts are Close to Optimal	53
3.2.1	An Overview of the Used Techniques	56
3.2.2	Cuts in Polygons	57
3.2.3	Removing Rectangular Lines	67
3.2.4	Removing Staircase Lines	84
3.2.5	Converting Curves in Polygons to Segments in Grids	96
3.3	Recursive Applications	117
3.3.1	An Overview of the Used Techniques	118
3.3.2	Sparsest Cuts	120
3.3.3	Edge Separators	122
3.3.4	Bisections	125
3.3.5	Balanced Partitions	128
3.4	Improving the Approximation Ratios	131
4	Computing Near-Balanced Partitions	135
4.1	Cutting with the Balance in Mind	136
4.1.1	An Overview of the Used Techniques	138
4.1.2	Related Work	140
4.2	A PTAS for Edge-Weighted Trees	142
4.2.1	The Cutting Phase	142
4.2.2	The Packing Phase	147
4.3	An Extension to Edge-Weighted Graphs	150
4.4	Improving the Runtime and Other Observations	152

5 The Hardness of k-Balanced Partitioning	155
5.1 The End of the Road	156
5.1.1 An Overview of the Used Techniques . . .	158
5.1.2 Related Work	160
5.2 A Reduction Framework	161
5.3 The Hardness for Grids and Trees	165
5.4 The Hardness for Constant Degree Trees	171
5.5 Tightness of the Hardness Results	177
6 Quo Vadis?	181
Bibliography	187
Glossary	195
Index	199
