Zusammenfassung	iii
Summary	vii
Preface	ix
1 Preliminaries	1
1.1 Complexity Theory	1
1.2 Propositional Logic	4
1.3 Probability Theory	8
2 A Qualitative Modeling Framework	17
2.1 Boolean Modeling Paradigms	18
2.2 Logical Framework for Interactions Networks	23
2.3 Structural Analysis	34
2.3.1 Graph Algorithms	35
2.4 Functionality	42
2.4.1 Complexity of IFFSAT	46
2.4.2 Integer Programming Approach	50
2.4.3 Computational Performance	53
2.5 Metabolic Network Structures	57
2.5.1 Minimal Cut Sets are Elementary Modes of a Dual Network	62
2.5.2 Computational Performance	65
2.5.3 Generalizations	67

Contents

3	Inconsistency, Merging, and Dynamic Extension	73
3.1	Detection of Inconsistencies & Timing Information	74
3.1.1	Monotone RIFFSAT	81
3.1.2	Complexity of the IP Approach	87
3.1.3	Set Theory Approach	94
3.1.4	Characterization of Inconsistencies	98
3.2	Integrating Logical Interaction Networks	106
3.2.1	Framework and Method	106
3.2.2	Application to the TCR & IL-2R Networks	111
4	Multiple Activation Levels and Activity Ranges	119
4.1	Integral Activation Levels	119
4.1.1	Systems of Polynomial Equations	124
4.2	Interval Satisfiability	128
4.2.1	Complexity Issues	130
4.3	Threshold Behavior in Random iSAT	136
4.3.1	Preliminaries	138
4.3.2	2-iSAT	142
4.3.3	An Algorithm for Random 3-iSAT	145
4.3.4	Analysis of the Algorithm	152
	Conclusions	193
	Bibliography	194
	List of Figures	214
	List of Tables	215
