

Contents

Introduction	1
1 Structure and properties of silica and fluoride glass fiber	5
1.1 Optical fiber fundamentals.....	5
1.2 Glass structure and host materials.....	7
1.3 Optical fiber losses.....	11
1.4 Rare earth doped fiber	14
1.5 Fiber laser.....	16
2 Spectroscopic Properties and Lifetime Measurements	17
2.1 Upconversion-Pumping Processes.....	17
2.2 Energy transfer.....	19
2.3 Photon avalanche	23
2.4 Laser Transitions and Upconversion-Pumping in Praseodymium-Doped ZBLAN Fiber Lasers.....	24
2.5 Experimental setup for lifetime measurement	30
2.6 Lifetime fit equation	32
2.7 Lifetime Experimental Measurements	40
2.7.1 Lifetime of Ytterbium.....	41
2.7.2 ¹ G ₄ Lifetime of Praseodymium.....	45
3 Fiber Connection Techniques	53
3.1 Thermal fiber connection methods between two similar fibers.....	53
3.2 Thermal diffused expanded core (TEC) technique.....	55
3.3 Thermal and mechanical properties of SiO ₂ and ZBLAN glasses.....	58
3.4 Thermal splicing technique.....	60
3.4.1 Setup and procedure.....	60
3.4.2 Properties of thermal splice and attenuation.....	64
3.4.3 Guidelines to obtain thermal splices of good quality	68
3.5 Non-thermal fiber connection method	69
3.5.1 Glue splicing technique –setup and procedure	69
3.5.2 Attenuation of the glue splice	74
3.5.3 Reflection of the glue splice including gel	75

4	Fiber laser using thermal and glue splice.....	77
4.1	Fused fiber coupler	77
4.2	Fiber loop mirror	82
4.3	Red fiber laser	84
4.3.1	Red laser with glue splice	84
4.3.2	Red laser with thermal splice.....	88
4.4	Fiber laser based on loop mirrors by using glue splice.....	89
4.5	Red tunable fiber laser by using thermal splice	96
5	Red fiber laser in linear and ring configurations with fiber connectors.....	101
5.1	Linear fiber laser with red emission.....	101
5.2	Red laser in ring configuration.....	105
5.3	Theoretical calculations	112
6	Red and orange tunable fiber lasers.....	119
6.1	Red fiber lasers used FC/PC connector	119
6.2	Red and orange tunable fiber laser with one active fiber.....	122
6.2.1	Tunable fiber laser using a grating of 1200 line/mm.....	122
6.2.2	Tunable fiber laser using a grating of 1800 line/mm.....	127
6.3	Red and orange tunable fiber laser with two active fibers.....	133
	Conclusions	145
	Publications.....	147
	References	149
