Abstract	v
Zusammenfassung	vii
Author's Declaration	ix
1 Introduction	1
1.1 A short story of GaN	1
1.2 GaN structure	2
1.3 Substrate options	2
1.4 AlGaIn/GaN high electron mobility transistors (HEMTs)	5
1.5 The status of GaN reliability	8
1.5.1 Heckmann diagram: crystal properties relations	11
1.6 Structures of this thesis	12
2 AlGaIn/GaN HEMT device fabrication	13
2.1 Motivation	13
2.2 Epitaxy	13
2.3 Process Technology	16
2.4 Defects	18
3 Device stressing and characterizations	25
3.1 Robustness tests	26
3.2 Long term lifetime tests	26
3.3 Electrical characterizations	28
3.4 Optical characterizations	32
3.5 Localized structural analysis	35
4 Design of experiments	39
4.1 Motivation	39

5	Results	43
5.1	GaN HEMTs critical voltage determination by DC-Step-Stress tests	44
5.1.1	Strain in AlGaN layer	48
5.1.2	Gate Technology and Substrate type	50
5.1.3	Summary	50
5.2	Influence of GaN cap on robustness of AlGaN/GaN HEMTs .	51
5.2.1	Electroluminescence	54
5.2.2	Electric Field simulation	57
5.2.3	Summary	58
5.3	Comparative study of AlGaN/GaN HEMTs robustness versus buffer design variations	60
5.3.1	Characterization by Electroluminescence	63
5.3.2	Simulations of band diagrams and internal electric field distribution	66
5.3.3	Summary	68
5.4	Degradation mechanisms of GaN HEMTs in dependence on buffer quality and gate technology	69
5.4.1	Electroluminescence	72
5.4.2	Summary	77
6	GaN reliability interpretations	81
6.1	Nature of leakage during pinched-off stress	82
6.2	Electroluminescence at ON- and OFF-state	85
6.2.1	Electroluminescence at OFF-state	86
6.2.2	Electroluminescence at ON-state	86
6.3	TEM investigations of dislocations	91
7	Conclusions and Outlook	93
	List of Publications/Conferences	97
	Bibliography	99
