SUMMARY	1
CHAPTER 1 General Introduction	6
1. Current situation of livestock production in Thailand	6
1.1. General facts about Thailand	6
1.2. Economic values of agriculture and livestock production	7
1.3. Pigs and beef cattle husbandry in Thailand	8
1.3.1. Pig production	8
1.3.2. Native pigs	10
1.3.3. Beef cattle production	12
1.3.4. Native cattle	14
1.3.5. Other major livestock in Thailand	16
2. Genetic diversity and evaluation of livestock	17
2.1. Assessment of genetic diversity and phylogeny	17
2.2. Molecular markers of genetic characterization in livestock	19
2.2.1. Mitochondrial DNA (mtDNA)	20
2.2.2. Microsatellite markers	21
2.2.3. Single Nucleotide Polymorphism (SNP)	23
3. Livestock genetic and breeding for climate change	24
4. Management strategies for animal genetic resources in Thailand	26
5. Objectives of the study	29
6. References	30

CHAPTER 2	Genetic Structure and Variation in Thai Indigenous Pig Populations based on the mtDNA Control Region	40
CHAPTER 3	Further Resolution of Porcine Phylogeny in Southeast Asia by Thai mtDNA Haplotypes	64
CHAPTER 4	Microsatellite Analysis of Thai Native and Commercial Pigs	76
CHAPTER 5	Polymorphism in the Bovine <i>HSP90AB1</i> Gene are associated with Better Heat Tolerance in Thai Indigenous Cattle	98
CHAPTER 6	General Discussion and Conclusions	114
	1. General Discussion	114
	2. Conclusions and Recommendations	123
	3. References	125
	ZUSAMMENFASSUNG	129
	APPENDICES	133
	ACKNOWLEDGEMENTS	143
	CURRICURUM VITAE	145
