Table of Contents

Summary	IV
Zusammenfassung	V
1 Introduction	1
2 Objectives	3
3 Theoretical Background	4
3.1 Bio-based Production of 1,5-Diaminopentane - a Polyamide Monomer.....	4
3.1.1 Replacement of chemical polymer synthesis	4
3.1.2 Metabolism of diaminopentane in <i>Escherichia coli</i> and <i>Corynebacterium glutamicum</i>	6
3.1.3 Bioprocess considerations.....	11
3.1.4 From diaminopentane to innovative polymers.....	12
3.2 <i>Corynebacterium glutamicum</i> as Industrial Workhorse.....	14
3.3 Metabolic Engineering of Diaminopentane-producing <i>C. glutamicum</i>	15
3.3.1 Diaminopentane biosynthesis and export.....	16
3.3.2 Central carbon metabolism.....	17
3.3.3 Alternative substrates	18
3.3.4 Systems metabolic engineering.....	19
4 Material and Methods	22
4.1 Strains	22
4.1.1 <i>Corynebacterium glutamicum</i>	22
4.1.2 <i>Escherichia coli</i>	23
4.2 Plasmids and Primers	23
4.3 Chemicals	26
4.4 Media.....	26
4.4.1 Complex media.....	26
4.4.2 Minimal medium.....	27
4.4.3 Industrial production media.....	29
4.5 Strain Conservation in Stock Cultures.....	32
4.6 Strain Cultivation.....	32
4.6.1 Batch cultivation in shake flasks	32
4.6.2 Fed-batch fermentation in bioreactor.....	33

4.7	Genetic Engineering	34
4.7.1	Isolation of chromosomal DNA from <i>C. glutamicum</i>	34
4.7.2	Polymerase chain reaction	35
4.7.3	Gel electrophoresis	36
4.7.4	Construction of transformation vectors	37
4.7.5	Transformation.....	38
4.7.6	Purification of plasmid DNA	40
4.7.7	Codon optimization	40
4.8	Analytical Methods.....	41
4.8.1	Determination of cell concentration	41
4.8.2	Quantification of glucose	42
4.8.3	Quantification of amino acids and biological polyamines	42
4.8.4	Quantification of trehalose and organic acids.....	43
4.8.5	Quantification of ammonium	44
4.8.6	GC-MS analysis of mass isotopomers	44
4.8.7	¹ H-NMR.....	46
4.9	Biochemical Methods	47
4.9.1	Preparation of crude cell extract	47
4.9.2	Enzyme activity measurement.....	47
4.10	Metabolome Analysis	49
4.10.1	Sampling by fast filtration.....	49
4.10.2	Metabolite extraction.....	50
4.11	Gene Expression Analysis	50
4.11.1	RNA extraction.....	50
4.11.2	DNA microarray	52
4.11.3	Real-time PCR	53
4.12	[¹³ C] Metabolic Flux Analysis.....	55
4.13	Elementary Flux Mode Analysis	56
4.14	Bioinformatic Tools	56
4.15	Preparation of N-acetyl-diaminopentane	56
4.16	Isolation of 1,5-diaminopentane	57
5	Results and Discussion	58
5.1	Proof of Concept – Diaminopentane Production with <i>C. glutamicum</i>	58
5.1.1	Construction of a basic diaminopentane producer	58
5.1.2	<i>In silico</i> based simulations	59
5.2	Improvement of Precursor Supply and Attenuation of Competing Pathways	60

5.3	Improvement of Succinyl-CoA Supply by Pathway Coupling.....	63
5.3.1	Deletion of succinyl-CoA synthetase	64
5.3.2	Metabolic flux response to <i>sucCD</i> deletion	67
5.3.3	Elucidation of potential metabolic by-passes of the deleted <i>sucCD</i> reaction.....	71
5.4	Enhancement of Biosynthetic Flux	76
5.4.1	Lysine decarboxylase as bottleneck.....	76
5.4.2	Amplification of lysine decarboxylase expression	77
5.4.3	Optimization of diaminopentane production through medium design	80
5.5	Elimination of By-Product Formation	81
5.5.1	Identification of the unknown by-product as N-acetyl-diaminopentane	81
5.5.2	Analysis of diaminopentane acetylation	86
5.5.3	Targeted deletion of acetyltransferases	87
5.5.4	Deletion of the lysine exporter <i>lysE</i>	91
5.6	Engineering of Product Export	93
5.6.1	Impact of diaminopentane on the metabolism of <i>C. glutamicum</i>	93
5.6.2	Transcriptome analysis as tool for the identification of novel genetic targets	95
5.6.3	Targeted deletion of the major facilitator permease Cg2893	97
5.6.4	Overexpression of Cg2893.....	99
5.6.5	Deletion of the TetR repressor Cg2894.....	102
5.6.6	Impact of permease expression level on pathway intermediates.....	104
5.7	De-novo Metabolic Engineering of the Wild Type of <i>C. glutamicum</i> into a Tailor-made Diaminopentane Hyperproducer	106
5.7.1	Increasing flux through the biosynthetic diaminopentane pathway	108
5.7.2	Minimization of carbon loss and enhancement of NADPH supply	108
5.7.3	Integration of diaminopentane specific targets.....	110
5.8	Production Performance under Industrial Fermentation Conditions.....	113
6	Conclusions and Outlook	117
7	Abbreviations and Symbols	119
8	References.....	122
9	Appendix.....	137
9.1	Plasmids and Primers	137
9.2	Codon Optimization	139
9.3	Data from ¹³ C Metabolic Flux Analysis	142
9.4	Elementary Flux Mode Analysis – Reactions and their Stoichiometry	146
