

Table of Contents

1. Introduction	1
1.1 Protected geographical indication (PGI) products.....	1
1.2 Discriminate parameters for characterizing the geographical origin of plant products.....	3
1.2.1 Stable isotope ratio (SIR).....	3
1.2.2 Mineral composition	5
1.3 Relevance of potatoes production and consumption.....	5
1.4 Quality parameters of table potatoes	7
1.4.1 After-cooking darkening (ACD).....	7
1.4.2 Chemical parameters affecting ACD.....	7
1.5 Aims of the research.....	8
References	9
2. Characterization of the geographical origin of potatoes in Germany by the stable isotope ratio of the tubers	15
2.1 Introduction.....	15
2.2 Materials and methods.....	16
2.2.1 Characterization of potato cultivars and their production conditions	16
2.2.2 Determination of the stable isotopes ^2H and ^{18}O	17
2.2.3 Determination of the stable isotope ^{13}C	18
2.2.4 Calculations and statistical analyses.....	18
2.3 Results	18
2.4 Discussion.....	25
2.5 Conclusion	28
References	28
3. Characterization of the geographical origin of potatoes in Germany by the mineral composition of the tubers	31
3.1 Introduction.....	31
3.2 Materials and methods.....	32
3.2.1 Characterization of potato cultivars and their production conditions	32
3.2.2 Determination of the minerals.....	33
3.2.3 Statistical analyses	34
3.3 Results	34
3.4 Discussion.....	43

3.5 Conclusion	45
References	46
4. Evaluation of the after-cooking darkening of table potatoes and the contribution of selected tuber constituents	49
4.1 Introduction.....	49
4.2 Materials and methods.....	50
4.2.1 Characterization of potato cultivars and their production conditions	50
4.2.2 Determination of dry matter.....	51
4.2.3 Determination of lightness value.....	51
4.2.4 Determination of ascorbic acid.....	52
4.2.5 Determination of citric acid.....	52
4.2.6 Determination of chlorogenic acid	53
4.2.7 Determination of macro and micro elements	53
4.2.8 Calculations and statistical analyses.....	54
4.3 Results	54
4.4 Discussion.....	61
4.4.1 Evaluation of ACD and selected tuber constituents on the cultivars collected from three studied regions	61
4.4.2 Evaluation of ACD and selected tuber constituents on the cultivars collected from the northern and western regions.....	64
4.4.3 Contribution of the selected tuber constituents.....	64
4.5 Conclusion	65
References	66
5. General conclusion	71
6. Summary	73
7. Appendices	75
