

Table of Contents

List of Symbols	vii
List of Abbreviations	xiii
1 Introduction	1
1.1 Automotive Antennas	2
1.2 Problem Definition	6
1.3 Objectives	8
2 Antenna Characterization	11
2.1 Scattering Parameters	12
2.2 Far Field Characteristics	15
2.3 Radiation Pattern of an Automotive Antenna Mounted on the Car Roof	15
2.4 Improvement of the Signal Reception Quality	20
2.4.1 Multipath and Doppler Effect	20
2.4.2 Diversity Systems	22
2.4.3 Multiple Input Multiple Output Systems	24
2.5 Antenna Correlation	25
2.6 Styling Criteria	27
2.7 Electromagnetic Compatibility Mechanisms	28
2.7.1 Operation Model of an Electric Monopole	29
2.7.2 EMC Coupling Mechanisms in Vehicles	30
3 Numerical Approaches for Automotive Antenna Computation	33
3.1 Fundamentals of Electromagnetics	33
3.1.1 Field Theory	33
3.1.2 Time Domain Description of Maxwell's Equations	35
3.1.3 Frequency Domain Description of Maxwell's Equations	37
3.1.4 Time Domain and Frequency Domain Transformation	37
3.1.5 Wave Equations for Electric and Magnetic Fields	38
3.1.6 Material Equations	38
3.1.7 Boundary Conditions	40

3.2	Numerical Methods in Electromagnetics	41
3.2.1	Finite Difference Time Domain Method	44
3.2.2	Finite Integration Technique	45
3.2.3	Transmission Line Matrix Method	48
3.2.4	Transmission Line Method	49
3.2.5	Lumped Circuit Transmission Line Method	53
3.3	Finite Volume Method	55
3.3.1	Finite Volume Time Domain Approach	55
3.3.2	Validation of the Finite Volume Time Domain Approach	56
3.4	Numerical Approaches Based on the Method of Moments	58
3.4.1	Mathematical Description of the Method of Moments	58
3.4.2	Deployment of the Method of Moments for Electromagnetic Fields	59
3.4.3	Validation of the Method of Moments	62
3.4.4	Equivalent Method of Popović	64
3.4.5	Thin Surface Method	65
3.4.6	Hybrid Method of Moments with Method of Auxiliary Sources	67
3.4.7	Comparison of the Presented Simulation Methods Based on MoM	69
3.4.8	Incorporation of Electrical Networks into the Simulation Models	72
3.5	Near Field Source Solution	74
4	Computation Time Optimization for MoM	77
4.1	Multi Excitation Approach	77
4.2	Multi Partitioning Approach	78
4.2.1	Matrix Partitioning for Front Window Antenna Investigations	80
4.2.2	Matrix Partitioning for Glass Window Parameter Investigations	83
4.2.3	Matrix Partitioning for Rear Window Parameter Investigations	84
4.3	Multi Partitioning and Multi Excitation Approach	85
4.4	Further Methods for Computation Time Optimization	87
5	Generation of the Simulation Model	89
5.1	General Rules for Simulation Model Generation	89
5.2	Discretization Rules for MoM Simulation	93
5.3	Glass Antenna Model Generation	93
5.4	Modelling of Electrical Networks	95
5.5	Ground Modelling	99
6	Virtual Development of Glass Antenna Systems	105
6.1	Strip-line Investigations	107
6.2	Far Field Investigations	112
6.3	Development Process of Rear Window Antennas	114

7	Keyless Entry Systems	117
7.1	Laboratory Investigations	119
7.1.1	Loop Antennas Systems	119
7.1.2	Ferrite Antenna Systems	122
7.1.3	Ferrite Antenna Sensitivity Determination	126
7.2	Virtual Development of Keyless Entry Systems	128
7.2.1	Ferrite Antenna Mounted in Car Door	128
7.2.2	Ferrite Antenna Mounted in Vehicle Car Bodyshell	131
7.2.3	Integration of the Keyless System Simulation in the Development Process	133
8	Development of Very High Frequency Antenna Systems	137
8.1	Roof Antenna Systems	138
8.2	Application of the Finite Volume Approach for RF System Development	139
8.3	Influence of the Antenna Environment on the Antenna Performance	144
8.4	System Development	154
9	Conclusion and Outlook	163
	Bibliography	167
