Abstract	v
Zusammenfassung	vii
1 Introduction	1
1.1 Motivation	1
1.2 Overview	4
1.3 Basics of Machining	6
1.4 Chip Morphology	9
1.5 Analytical description of cutting mechanics	12
1.5.1 Shear plane model	12
1.5.2 Oxley's predictive machining theory	15
1.5.3 Algorithm for machining calculations using Oxley's theory	17
2 Finite Element Model	19
2.1 Finite Element modelling	20
2.2 Components of an FE Model	21
2.2.1 Geometric description	21
2.2.2 Choice of solution methods	21
2.2.3 Material Models	27
2.3 FE Model description and issues	33
2.3.1 Meshing	41
2.4 Hourglass Control	43
2.5 Computational expense	51
2.6 Comparison of results	54

3	Parameter identification from standard experiments	57
3.1	Material state during machining	58
3.2	Experimental determination of material parameters . . .	60
3.2.1	Split Hopkinson bar testing	61
3.2.2	Limitations	64
3.3	Adiabatic and isothermal stress strain curves	67
3.4	Machinability of Titanium alloys and Nickel based super- alloys	70
3.5	Material modelling and simulation	74
3.5.1	Parameter identification: Ti-15-3-3-3	75
3.5.2	Simulation of chip formation: Ti-15-3-3-3	76
3.5.3	Parameter identification: Alloy 625	78
3.5.4	Modification of material model for Alloy 625 . . .	83
3.5.5	Chip formation simulation using the modified ma- terial model of Alloy 625	85
3.5.6	Parameter identification: Ti-6246	90
3.5.7	Simulation of chip formation: Ti-6246	91
3.6	Discussion	92
4	Non-Uniqueness	97
4.1	Analysis of the Johnson-Cook model	97
4.2	Existence of non-uniqueness	101
4.3	Study of non-uniqueness	112
4.4	Differentiating similar parameter sets	122
4.5	Conclusion	131
5	Inverse Parameter Identification	135
5.1	Introduction	135
5.2	The inverse identification problem	140
5.2.1	Minimisation algorithms used	140
5.2.2	Error Function	148
5.3	Validation	149
5.3.1	Single parameter identification	150
5.3.2	Identification of 2 parameters	152
5.4	Identification of 3 parameters	160
5.5	Effect of the mesh size	162
5.6	Transformed optimisation variables	167
5.7	Multistage optimisation	169
5.7.1	Staggered optimisation	171
5.7.2	Dual method	173
5.8	Effect of the error function	183
5.9	Non-adiabatic optimisation	185

5.10	Identification of other parameter combinations	186
5.10.1	Parameters m and C	189
5.10.2	Parameters A , n , C	191
5.10.3	Parameters A , B , C	193
5.11	Solution improvement using the knowledge of stress-strain curves	193
5.11.1	Translation	194
5.11.2	Stress scaling	196
5.11.3	Identification of 4 parameters	196
5.11.4	Non-adiabatic optimisation	197
5.12	Conclusion	199
6	Conclusion and outlook	205
A	Algorithms	213
	References	233
