Contents

1 Introduction **1**

1.1 Motivation and background 3

1.2 Contents of this work 7

1.3 Connection to PoreNet 8

2 State of the art **9**

2.1 Capillary rise and wicking 9

2.1.1 Capillary rise 12

2.1.2 Wicking 15

2.2 Porous media 17

2.2.1 Porosity 17

2.2.2 Specific surface area and hydraulic diameter and radius 18

2.2.3 Tortuosity 19

2.2.4 Static pore radius 20

2.2.5 Suction pressure 21

2.2.6 Representative elementary volume 23

2.2.7 Permeability 24

2.3 Pressure loss of flow in porous media 25

2.3.1 Flow in ducts 26

2.3.2 Capillary model 28

2.3.3 Hydraulic radius model 29

2.3.4 Drag models 31

2.3.5 Ergun equation 34

2.4 Simulations with Flow 3D 35

2.5 Simulations on pore level with surface geometry obtained from tomography 37

3 Transport equations of wicking processes **39**

3.1 Isothermal wicking without liquid vaporization 42

3.2 Isothermal wicking with liquid vaporization on the surface area of the wicking region 45

3.3 Non-isothermal wicking: Wicking of saturated liquid into a porous medium of high initial temperature 48

3.4 Transport equations for wicking in samples of circular cross section 56

3.5 Dimensionless formulation of the obtained equations 57

3.5.1 Isothermal wicking without liquid vaporization 58

3.5.2 Isothermal wicking with liquid vaporization on the surface area of the wicking region 58

3.5.3 Non-isothermal wicking: Wicking of saturated liquid into a porous medium of high initial temperature 59

4 Experimental investigation and comparison with theory **61**

4.1 Experimental setup 61

4.2 Physical properties of employed porous media and experiment liquids . . . 65

4.2.1 Porous media 65

4.2.2 Experiment liquids 72

4.3 Determination of structured parameters of glass frits 73

4.3.1 Porosity 73

4.3.2 Static radius 76

4.3.3 Permeability 80

4.4 Isothermal wicking at room temperature 83

4.5 Wicking with liquid nitrogen 94

4.5.1 Quasi-isothermal wicking experiments with LN2 in a deep dewar . . 95

4.5.2 LN2 wicking in a flat dewar 100

4.5.3 LN2 wicking in a deep dewar with glass frits of high initial temperature 103

4.5.4 Reproducibility of wicking experiments with LN2 106

4.6 Dimensional analysis 106

4.7 Analytical solutions 109

4.8 Conclusions 112

5 Acquisition of surface geometry **115**

5.1 Construction of surface geometry with CAD software 115

5.2 Tomography 117

6 Microscopic simulations on pore level for the determination of structural parameters **121**

6.1 Benchmark simulations 122

6.1.1 Capillary rise and fall 122

6.1.2 Pressure loss in ducts 128

6.1.3 Pressure loss in ordered sphere packings 131

6.2 Simulations with a real porous medium 136

6.2.1 Calculation of permeability using pressure drop 136

6.2.2 Calculation of static radius using simulations 138

6.3 Conclusions 143

7 Simulations of wicking processes on macroscopic level **145**

7.1 Isothermal wicking 145

7.2 Non-isothermal wicking 150

8 Summary **151**

8.1 Theoretical modeling 152

8.2 Experimental investigation 152

8.3 Numerical simulations 154

8.3.1 Acquisition of surface geometry 154

8.3.2 Microscopic simulations 154

8.3.3 Macroscopic simulations 155

Appendix **156**

A Non-isothermal wicking: Gaseous environment has no temperature gradient **157**

B Transport equations for wicking in samples of circular cross section **163**

B.1 Isothermal wicking with evaporation 164

Dieses Werk ist copyrightgeschützt und darf in keiner Form vervielfältigt werden noch an Dritte weitergegeben werden.
Es gilt nur für den persönlichen Gebrauch.

B.2 Non-isothermal wicking: Wicking of saturated liquid into porous media of high initial temperature 167
B.2.1 Non-isothermal wicking: Wicking of saturated liquid into a warm solid structure (gaseous environment has no temperature gradient) . 171

C Dimensionless formulations of the obtained wicking transport equations 175
C.1 Gaseous environment has a linear temperature gradient 175
C.2 Gaseous environment has no temperature gradient 183
C.3 Isothermal wicking with evaporation 186

D Calculation of structural parameters based on data sheets from supplier (Robu) 187
D.1 Pressure drop measurements with water 189
D.2 Pressure drop measurements with air 190

E Summary of dimensionless numbers for performed vertical wicking experiments 191

F Flow 3D settings 195
F.1 Pressure loss in glass frits 195
F.2 1 g simulation for calculation of static radius 196
F.3 0 g simulation for calculation of static radius 197
F.4 Isothermal macroscopic simulations 198

Bibliography 199
