

Table of Contents

1	Introduction.....	1
1.1	Domino Reactions.....	1
1.1.1	Classification.....	1
1.1.2	Examples of Domino Reactions in Organic Synthesis.....	3
1.2	The HECK Reaction.....	5
1.2.1	The Reaction Mechanism.....	6
1.2.2	Heck Reaction in Domino Approaches.....	13
1.3	Carbohydrates in Synthetic Chemistry.....	15
1.3.1	Carbohydrate Mimetics.....	15
1.3.2	Carbohydrates as Synthons in Drug Discovery.....	17
2	Objectives.....	21
2.1	Target Structures.....	21
3	Results and Discussion.....	23
3.1	Chromans and Isochromans by Intramolecular Domino Carbopalladation Reactions.....	23
3.1.1	Synthesis of substituted 2-Bromoglycals.....	24
3.1.2	Synthesis of differently substituted dialkynes.....	26
3.1.3	Alkyne–Glycal Coupling by Nucleophilic Substitutions.....	27
3.1.4	Domino Carbopalladation Reaction for the Synthesis of Chromans and Isochromans.....	28
3.1.5	Mechanistic Considerations About the Domino Sequence.....	29
3.2	Pd-Catalyzed Domino Reactions of Diynyl-Substituted Bromoarenes.....	30
3.2.1	Synthesis of Linked Bromoarenes with Dialkynes.....	32
3.2.2	Domino Reactions for the Benzanellation to Naphthalene Derivatives.....	34
3.2.3	Spectroscopic Analysis of the Benzofurane Side Product.....	39
3.2.4	Mechanistic Considerations About the Domino Process.....	40
3.2.5	Optimization and Synthesis of Various Domino Products.....	42

3.3	Multiple Carbopalladation Reactions on Linear Oligoalkynes	45
3.3.1	Synthesis of Different Triplealkynes	45
3.3.2	Domino Reactions of Triynes	49
3.4	Synthesis of Chromans and Isochromans by an Intermolecular Domino Approach	52
3.4.1	Alkyne–Glycal Coupling via Nucleophilic Substitution or Ferrier Reaction	53
3.4.2	Intermolecular Domino-Carbopalladation Reaction to Chromans and Isochromans	55
3.4.3	Deprotection Reactions of the Domino Products	58
3.5	Tandem-Domino Reaction to Chiral Biphenyls	59
3.5.1	Synthesis of Tetraalkynylated Domino Precursors	60
3.5.2	Investigation of the Tandem-Domino Process	62
3.6	Synthesis of Anthracycline Derivatives via Multiple Carbopalladation Reactions	64
3.6.1	Synthetic Target and Retrosynthetic Analysis	64
3.6.2	Investigation of Dialkynes for the Intermolecular Domino Reaction	66
3.6.3	Intramolecular Domino Reaction of Different Dialkynes and Glycals	68
3.6.4	Synthesis of Model Compounds for the Intramolecular Domino Reaction	71
3.6.5	Synthesis of Various Dialkynes with Different Terminal Silyl Substituents	74
3.6.6	Silyl Ether Formation of different Dialkynes and Glycals	77
3.6.7	Survey of Domino-Carbopalladation Reactions	79
3.6.8	Derivatization Studies of the Domino Products	81
3.6.9	Final Anthracycline Synthesis	88
4	Summary	91
4.1	A Ridge Walk Between Naphthalenes and Benzannelated Heteroarenes	91
4.2	Multiple Carbopalladation Sequence to Bis-Spiro Compounds	92
4.3	Intra- and Intermolecular Carbopalladations to Access Chromans and Isochromans	93
4.4	Winding up Alkynes: A Tandem-Domino Reaction to Chiral Biphenyls	94

4.5	Synthesis of Anthracycline Derivatives.....	95
5	Outlook.....	97
5.1	Tandem-Domino Approach to Linear Materials.....	97
5.2	Synthesis of 3,3'-Bispyrroles and 3,3'-Bisfuranes.	98
5.3	Total Synthesis of Idarubicin Aglycon	99
6	Experimental	101
6.1	General Experimental	101
6.1.1	Preparative Methods	101
6.1.2	Chromatography	101
6.1.3	Instrumental Analytics	102
6.2	Synthesis and Analytical Data of the Compounds.....	103
6.2.1	Synthesis and Data of additional Chromans	103
6.2.2	Synthesis and Data of the Compounds with Aromatic Backbone	111
6.2.3	Synthesis and Data of Polyalkyne Compounds.....	142
6.2.4	Chromans and Isochromans by Intermolecular Domino-Reactions.....	151
6.2.5	Synthesis and Data of Persubstituted Biphenyls and their Precursors.....	174
6.2.6	Synthesis of Anthracycline Derivatives	189
6.3	X-Ray Crystal Structure Data	222
7	Appendix	225
7.1	Abbreviations	225
7.2	References.....	228
