Contents

Introduction **9**

1 Basic Definitions and Notation **13**
1.1 Graphs . . . 13
1.2 Flows and Networks . . . 14
1.2.1 Definitions . . . 14
1.2.2 Important results . . . 16
1.3 Algorithms and Complexity . . . 17
1.3.1 Polynomial-time algorithms . . . 18
1.3.2 $\mathcal{P}$, $\mathcal{NP}$, and co-$\mathcal{NP}$ . . . 18
1.3.3 $\mathcal{NP}$-complete problems . . . 19
1.3.4 Complexity of optimization problems . . . 19
1.3.5 Approximation . . . 20
1.4 Linear Programming and Integer Programming . . . 20
1.4.1 Linear programs . . . 20
1.4.2 Integer programs . . . 22

2 Destination-based Routing and Confluent Flows **25**
2.1 Guideposts, destination-based routing, and confluent flows . . . 25
2.1.1 Guideposts . . . 25
2.1.2 Destination-based Routing . . . 25
2.1.3 Applications . . . 26
2.1.4 Intuitive description of confluent flows . . . 27
2.2 Preliminaries . . . 28
2.3 Related problems . . . 31
2.3.1 Bottleneck paths . . . 31
2.3.2 Unsplittable and k-splittable flow . . . 32
2.3.3 Disjoint paths . . . 32
2.3.4 Confluent flows with uniform arc capacities and congestion . . . 33
2.3.5 Mixed integer programming and confluent flows . . . 34
2.3.6 Confluent flows over time on trees . . . 35
2.3.7 Spanning trees, minimum cost flows and setup costs . . . 35
2.4 Complexity . . . 36
2.5 A mixed integer programming formulation . . . 39
2.6 A max-flow min-cut theorem . . . 40
2.7 Arc-confluent flows . . . 45
2.7.1 Definition of arc-confluent flow . . . 45
2.7.2 Complexity results for arc-confluent flows . . . 47

3 Algorithms for Confluent Flows **51**
3.1 Confluent flows on trees . . . 51
3.1.1 Maximum Confluent Flows on trees with a single sink . . . 51
3.1.2 Confluent transshipments on trees . . . 52
3.2 Confluent flows on graphs with small treewidth . . . 53
3.2.1 Treewidth . . . 54
3.2.2 The dynamic programming approach . . . 57
3.2.3 Computing the tables . . . 59
3.2.4 Putting it all together . . . 68
3.2.5 Constructing an FPTAS . . . 70
3.3 Confluent flows on outerplanar graphs . . . 71
3.3.1 Outerplanar graphs . . . 71
3.3.2 Solving confluent flows on outerplanar graphs . . . 71
3.3.3 Dynamic programming . . . 76
3.3.4 Simple functions . . . 78
3.3.5 Runtime analysis . . . 80
3.3.6 Confluent flows and minors . . . 80
3.4 Planar graphs with all terminals on the boundary . . . 83
3.4.1 Boundary instances . . . 83
3.4.2 Preliminaries . . . 84
3.4.3 An algorithm for boundary instances . . . 89
3.5 Conclusion and open problems . . . 93

4 Traffic Signal Coordination **95**
4.1 Introduction to traffic signals . . . 95
4.1.1 A brief history of traffic signals . . . 95
4.1.2 The language of traffic signals . . . 97
4.1.3 Safety constraints . . . 98
4.1.4 Controlling traffic signals . . . 100
4.2 Traffic assignment . . . 101
4.2.1 Motivation . . . 101
4.2.2 System optimal flows . . . 101
4.2.3 User equilibria and Wardrop's principles . . . 102
4.2.4 Dynamic Flows . . . 104
4.2.5 Dynamic traffic assignment . . . 106
4.2.6 Computing assignments . . . 107
4.3 Optimizing traffic signals . . . 109
4.3.1 Measures of performance . . . 109
4.3.2 Optimization of pretimed signals . . . 110
4.3.3 Adaptive traffic signals . . . 112
4.3.4 Simultaneous coordination and assignment . . . 113
4.3.5 Tools . . . 113
4.3.6 Conclusions . . . 115
4.4 Complexity of signal coordination . . . 115

5 A New Model **119**
5.1 Motivation . . . 119
5.2 The new model . . . 121
5.2.1 Cyclically time-expansion . . . 121
5.2.2 Expanded intersections . . . 122
5.2.3 Modeling traffic signals . . . 123
5.2.4 Modeling traffic assignment . . . 124
5.3 Mixed integer programming formulation . . . 124
5.4 Properties of the model . . . 125
5.5 Analyzing link performance . . . 126
5.5.1 Link performance of a single road . . . 127
5.5.2 Link performance for platoons of cars . . . 128
5.5.3 Link performance in networks and user equilibria . . . 130
5.6 Model improvements . . . 134
5.6.1 Split and phase optimization . . . 134
5.6.2 Multiple signal plans . . . 137
5.6.3 Flow dependent travel times with fan graphs . . . 137
5.6.4 Queues . . . 138
5.6.5 First-in first-out . . . 138
5.6.6 Intersections without signals . . . 140

6 Experiments **141**
6.1 Scenarios . . . 141
6.1.1 Portland and Denver . . . 141
6.1.2 Braunschweig and Cottbus . . . 142
6.2 Test procedure . . . 144
6.2.1 Data processing . . . 145
6.2.2 Simulation . . . 146
6.3 Installing green waves . . . 147
6.4 Comparison to established approaches . . . 149
6.5 Advantages of simultaneous assignment . . . 150
6.6 Solving the MIP . . . 157
6.6.1 Influence of granularity . . . 158
6.6.2 Column generation . . . 159
6.6.3 Relaxation and Branch&Cut. . . . 160
6.7 Conclusion . . . 161

Bibliography **165**

List of figures **177**

Index **179**
