Content

1 Introduction	1
1.1 Surfactant Technology - History and Application.....	1
1.2 Objectives	5
2 Fundamentals.....	7
2.1 Microemulsions	7
2.1.1 Phase Behaviour of Binary Mixtures	8
2.1.2 The Phase Prism.....	9
2.1.3 Isoplethal Sections through the Phase Prism	11
2.1.3.1 The $T(\gamma)$ -Section - the so called "Fish tail"-cut	11
2.1.3.2 The Optimal State	13
2.1.3.3 The $T(w_A)$ -Section - Oil-rich Microemulsions	15
2.1.4 Microstructure and the Amphiphilic Film.....	18
2.1.4.1 The Amphiphilic Film	18
2.1.4.2 Structural Evolution.....	22
2.1.5 Amphiphilic Block Copolymers as Efficiency Booster	28
2.2 Neutron Scattering.....	31
2.2.1 General Aspects	31
2.2.2 Small Angle Neutron Scattering	34
2.2.3 Raw Data Treatment	35
2.2.4 Scattering from Particles	35
2.2.5 Scattering Models for Cylindrical Microemulsion Droplets.....	39
2.2.6 Scattering Model for Emulsion Droplets in the Presence of other Droplets.....	40
2.2.7 Structure Factors for Microemulsion Droplets	42
2.2.8 Inhomogeneous Systems.....	45
2.2.9 Debye Model	46
2.2.10 Ornstein-Zernicke Model	47
2.2.11 Teubner-Strey Model	47
2.2.12 Porod and Invariant Porod Analysis.....	49
2.3 Kinetics	51
2.3.1 General Aspects	51
2.3.2 Stopped-Flow Measurements.....	53
2.4 Experimental Methods.....	56

2.4.1	Determination of the Phase Boundaries of Microemulsions	56
2.4.2	Stopped-Flow Measurements	58
2.4.3	Static and Time-Resolved Small Angle Neutron Scattering	60
2.4.4	Electric Conductivity Measurements	62
3	Polymeric Additives and their Influence on Phase Behaviour and Structure Formation.....	63
3.1	Theoretical Background and Synthesis of the Proposed Polymers	64
3.2	Influence on the Lamellar Phase in Balanced Microemulsions.....	67
3.2.1	An Average Technical Polymer - Tego EBE 55x.....	69
3.2.2	Model Polymer PBO4-PPO3-PEO4	73
3.2.3	Model Polymer PBO5-PEO5	76
3.2.4	Model Polymer PBO5 - PPO0.5 - PEO5	80
3.2.5	Model Polymer BO2-EO	84
3.2.6	Evaluation of the Trends Observed	87
3.2.7	Systematic Small Angle Neutron Scattering Experiments	90
3.2.8	Summary & Discussion	109
3.3	Network Phase Transitions and the <i>Closed Loop</i> in Oil-Rich Microemulsions with Diblock Copolymers	115
3.3.1	Theoretical Background.....	115
3.3.2	The <i>Closed Loop</i> as a Function of Polymer Content.....	120
3.3.3	Network Transitions within Oil-rich Microemulsions as a Function of Polymer Content	131
3.3.4	Summary and Discussion.....	138
4	Formation Kinetics of Oil-Rich Non-ionic Microemulsions	139
4.1	Theoretical Background.....	140
4.2	Setup and Calibration of the Stopped-Flow.....	144
4.3	Phase Behaviour of the Systems studied	153
4.4	Mixing of Two Identical Microemulsions	159
4.5	Mixing of Two Slightly Different Microemulsions	163
4.6	Mixing of an Unstructured Binary Mixture with Water	167
4.7	The Influence of Polymeric Additives	175
4.7.1	Evaluation of Two Identical Microemulsions	176
4.7.2	Microemulsion Formation with $\delta = 0.05$ in Bulk Contrast.....	180
4.7.3	Microemulsion Formation with $\delta = 0.05$ in Film Contrast.....	187
4.7.4	Microemulsion Formation with $\delta = 0.10$ in Bulk Contrast.....	194
4.7.5	Microemulsion Formation with $\delta = 0.10$ in Film Contrast.....	200

4.8	The Resulting Formation Mechanism	207
4.8.1	Polymer-free Formation Mechanism	207
4.8.2	Polymer-containing Formation Mechanism.....	210
5	Summary	213
6	Appendix	219
6.1	Abbreviations and Symbols.....	219
6.2	Chemicals Used	231
6.3	End-to-End Distances of the Polymer Blocks and their Approximation	232
6.4	Derivation of the Relation between f_A and d_{TS}/ξ_{TS}	234
6.5	Fit Parameters of the Bicontinuous Polymer Systems	236
6.6	Data Analysis of the Aqueous Polymer Solution used in the Stopped-Flow Experiments.....	237
6.7	Time-resolved Small Angle Neutron Scattering Fit Parameters	243
6.8	Literature	251
