Table of Contents

1	<i>Introduction</i>	1
1.1	Osmoadaptation of halophile microorganisms	1
1.2	Cellular response on osmotic shocks	3
1.3	<i>A. haloalkaliphilus</i> – possibilities and chances	4
1.4	Objectives.....	5
2	<i>Theory</i>	7
2.1	Ectoine as an important compatible solute.....	7
2.2	Halophilic microorganisms as potential producing organisms.....	11
2.3	Process development.....	14
2.3.1	Process optimization by experimental design using extremophiles	14
2.3.2	Single cell measurements as important process tool	17
2.3.3	Membrane fluidity as a parameter for membrane associated stress.....	21
2.3.4	Phenotype arrays – screening method for biological requirements	27
3	<i>Material and Methods</i>	29
3.1	Microorganisms and stock cultures	29
3.2	Cultivations conditions.....	29
3.2.1	Microtiter plates	29
3.2.2	Deep-well plates	30
3.2.3	Centrifuge tubes	31
3.2.4	Shake flasks	31
3.2.5	Lab-scale bioreactors	32
3.3	Osmotic and thermal treatment	33
3.4	Hydrolysis of hemicellulose	33
3.5	Substrate and product analysis	34
3.5.1	Sugars	34
3.5.2	Amino acids.....	34
3.5.3	Organic acids.....	35
3.5.4	Ectoines.....	36

3.6	Quantification of cell concentration	36
3.6.1	Optical density	36
3.6.2	Cell dry weight	36
3.7	Phenotype microarrays	37
3.8	Flow cytometry	41
3.8.1	Membrane potential	41
3.8.2	Membrane integrity	44
3.9	Membrane fluidity	47
3.10	Confocal laser scanning microscopy	51
3.11	Experimental Design	51
3.12	Chemicals	52
4	Results and Discussion	53
4.1	Minimal medium development	53
4.1.1	Basal mineral medium	53
4.1.2	Metabolized compounds using alkaline nutrient broth	54
4.1.3	Screening for substrates	56
4.1.4	Single carbon and nitrogen sources	59
4.2	Identification of industrial raw materials	61
4.2.1	Peptides	61
4.2.2	Corn steep liquor	62
4.2.3	Vinasse	64
4.2.4	Xylan-Hydrolysates	66
4.2.5	Selected industrial raw material	68
4.3	Optimization of growth and productivity	70
4.3.1	Assessment of optimization range	70
4.3.2	Optimization using response surface methodology	72
4.4	Operational mode	76
4.4.1	Model-driven strategies	76
4.4.2	Batch-processes	77
4.4.3	Model and obtained values	78
4.4.4	Bacterial growth and ectoine production	79
4.4.5	High substrate cultivation	80

4.5	Product secretion subsequent to osmotic shocks	82
4.6	Cellular state of <i>A. haloalkaliphilus</i> during ectoine production and release	83
4.6.1	Cellular activity at optimized conditions.....	83
4.6.2	Influence of osmotic down-shocks.....	85
4.7	Membrane fluidity during stress conditions	87
4.7.1	Combined thermal and osmotic up-/down-shocks.....	87
4.7.2	Effect on phase transition temperature.....	91
4.7.3	Membrane fluidity and ectoine release.....	92
5	Conclusions and Outlook.....	95
5.1	Nutrient requirements of <i>A. haloalkaliphilus</i>	95
5.2	Optimized cultivation conditions	96
5.3	Ectoine release.....	96
5.4	Change in cellular state and membrane characteristics.....	97
5.4.1	Cellular activity	97
5.4.2	Cellular integrity.....	97
5.4.3	Membrane fluidity	98
5.4.4	Membrane properties during ectoine release	99
5.5	Future application	99
