

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>State of the Art</b>	<b>7</b>
2.1	Chemical looping combustion (CLC) . . . . .	7
2.1.1	Oxygen carriers . . . . .	9
2.1.2	Operational experience with solid fuels . . . . .	10
2.2	Interconnected fluidized bed systems . . . . .	26
2.3	Fluid mechanics . . . . .	29
2.3.1	Cold model investigation of different CLC designs . . . . .	29
2.3.2	Measurement of solids circulation flux . . . . .	31
2.4	Attrition . . . . .	32
2.4.1	Attrition models . . . . .	34
2.4.2	Attrition of oxygen carriers . . . . .	36
2.5	Flowsheet simulation of fluidized bed systems . . . . .	38
2.5.1	Fluid dynamics of the fluidized beds . . . . .	38
2.5.2	Population balance . . . . .	39
<b>3</b>	<b>Experimental</b>	<b>41</b>
3.1	Fluidized bed facilities . . . . .	41
3.1.1	Chemical looping combustion facility . . . . .	41
3.1.2	CLC facility cold flow model . . . . .	50
3.1.3	Circulating fluidized bed . . . . .	52
3.2	Special measurement techniques . . . . .	55
3.2.1	Gas flow rate measurement by tracer gas injection . . . . .	55
3.2.2	Assessment of the solids circulation rates . . . . .	56
3.2.3	Assessment of the material's attrition propensity . . . . .	61
3.2.4	Measurement of the catalyst loss . . . . .	64

3.3	Material . . . . .	65
3.3.1	Materials used in the CLC facility . . . . .	65
3.3.2	Materials used in the CLC cold flow model . . . . .	70
3.3.3	Material used in the CFB . . . . .	70
3.4	Application of flowsheet simulation . . . . .	71
3.4.1	Assessment of attrition occurring in the riser of a CFB . . . . .	71
3.4.2	Simulation of attrition in the CLC process . . . . .	72
<b>4</b>	<b>Results and Discussion</b>	<b>75</b>
4.1	Attrition tests . . . . .	75
4.1.1	Overview of attrition constants . . . . .	79
4.2	Attrition in the riser of a circulating fluidized bed . . . . .	81
4.2.1	Operation of the circulating fluidized bed . . . . .	81
4.2.2	Catalyst loss from the circulating fluidized bed . . . . .	81
4.2.3	Assessment of the catalyst's attrition occurring in the riser . . . . .	87
4.3	Chemical looping combustion facility cold model . . . . .	91
4.3.1	Pressure profile . . . . .	91
4.3.2	Circulation rate in the cold model of the CLC facility . . . . .	97
4.3.3	Gas leakage in the cold model of the CLC facility . . . . .	100
4.3.4	Calculation of the gas flow through the standpipe SP1 . . . . .	101
4.4	Chemical looping combustion facility . . . . .	105
4.4.1	Operational behavior of the CLC facility . . . . .	105
4.4.2	Combustor performance . . . . .	115
4.4.3	Circulation rate in the CLC facility . . . . .	125
4.4.4	The loss of OC and C-fix from the CLC facility . . . . .	127
4.4.5	Effect of the two-stage design on the gas composition . . . . .	132
4.4.6	Effect of the two-stage design on the fuel conversion . . . . .	134
4.4.7	Gas leakage . . . . .	140
4.5	Simulation of attrition . . . . .	142
4.5.1	Chemical looping combustion facility . . . . .	142
4.5.2	Scale-up to 100 MW <sub>th</sub> CLC unit . . . . .	148
4.6	Consequences for the industrial scale unit . . . . .	154
<b>5</b>	<b>Summary and Conclusion</b>	<b>161</b>
