

I INTRODUCTION	1
II THEORETICAL BACKGROUND.....	15
2.1 Microencapsulation.....	15
2.1.1 Type of microcapsules	15
2.2 Fats and oils	16
2.3 Fish oil as the source of omega-3 polyunsaturated fatty acids (PUFAs)	16
2.3.1 Types and sources of fatty acids	16
2.3.2 Structure of polyunsaturated fatty acids.....	17
2.3.3 Nutritional benefits of omega-3 PUFAs.....	17
2.4 Lipid oxidation.....	18
2.4.1 Autoxidation of PUFAs.....	18
2.4.2 Pro-oxidants and antioxidants	19
2.4.3 Effect of tocopherol on autoxidation of fish oil	20
2.4.4 Lipid oxidation in oil-in-water emulsions	23
2.5 Encapsulation methods	27
2.5.1 Spray drying	28
2.5.1.1 Atomization	30
2.5.1.2 Drying of droplets	30
2.5.2 Freeze drying.....	33
2.5.2.1 Freezing	34
2.5.2.2 Primary drying.....	36
2.5.2.3 Secondary drying.....	37
2.5.2.4 Structural changes of freeze-dried food	37
2.5.2.5 Entrapment of oil droplets during freeze drying	40
2.5.3 Spray granulation	43
2.5.3.1 The spouted bed	43
2.5.3.2 Glatt-ProCell spouted bed	45
2.5.4 Fluid-bed film coating	47
2.5.4.1 Particle motion	50
2.5.4.2 Atomization	51
2.5.4.3 Droplet-particle collision.....	52
2.5.4.4 Droplet impact and adherence.....	52
2.5.4.5 Droplet impact and spreading	53
2.5.4.6 Infiltration and drying	53
2.5.4.7 Film formation and layering.....	55
2.6 Coating materials (encapsulation matrix).....	55
2.6.1 β -Cyclodextrin.....	57
2.6.2 Hydroxypropyl- β -Cyclodextrin (HPBCD).....	59
2.6.3 Soybean soluble polysaccharide.....	61
2.6.4 Maltodextrins	62
2.6.5 Modified starch	64
2.6.5.1 Chemically modified waxy maize starch	66

III OBJECTIVES.....	69
IV MATERIAL AND METHODS	73
4.1 Materials	73
4.1.1 Fish oil.....	73
4.1.2 Matrices	73
4.1.3 Chemicals	74
4.1.3.1 Peroxide value analysis	75
4.1.3.2 Headspace gas chromatography analysis	75
4.1.3.3 Analysis of surface oil and total oil content	76
4.1.4 Equipment	76
4.1.4.1 Spouted bed (Glatt-ProCell-5 Lab System).....	76
4.1.4.2 Fluid bed film coating (Würster Process), GPCG-1	77
4.1.4.3 Spray dryer: Nubilosa AJM 014.....	78
4.1.4.4 Freeze dryer	79
4.1.5 Analytical equipment	80
4.1.6 Auxiliary and consumable materials	82
4.2 Methods	83
4.2.1 Preliminary research.....	83
4.2.1.1 Preparation of emulsions	83
4.2.1.2 Spray granulation	84
4.2.1.3 Fluid bed film-coating process	84
4.2.1.4 Peroxide value analysis	85
4.2.1.5 Headspace propanal.....	85
4.2.1.6 Storage condition.....	87
4.2.1.7 Particle size analysis.....	87
4.2.1.8 Total oil measurement	87
4.2.1.9 Surface oil content measurement	88
4.2.1.10 Calculation of encapsulation efficiency	88
4.2.1.11 Moisture content analysis.....	88
4.2.1.12 Water activity (Aw).....	88
4.2.1.13 Scanning electron microscopy	89
4.2.1.14 Experimental design and statistical analysis	89
4.2.2 Main research	89
4.2.2.1 Spray drying	90
4.2.2.2 Freeze drying.....	91
V RESULTS.....	92
5.1 Preliminary research.....	92
5.1.1 Production of microcapsules by spray granulation	94
5.1.1.1 Storage at room temperature (± 21 °C)	94
5.1.1.2 Storage in refrigerator (3-4 °C)	95
5.1.2 Production of microcapsules by fluid bed film coating	97
5.1.2.1 Storage at room temperature (± 21 °C)	98
5.1.2.2 Storage in refrigerator (3-4 °C)	100

5.1.3 Microencapsulation efficiency (ME)	101
5.1.4 Particle size distribution	103
5.1.5 Morphology of microcapsules.....	104
5.2 Main research	105
5.2.1 Production of microcapsules by spray granulation	105
5.2.1.1 Powder morphology and particle size distribution.....	108
5.2.2 Production of microcapsules by spray drying	110
5.2.2.1 Powder morphology and particle size distribution.....	112
5.2.3 Production of microcapsules by freeze drying.....	113
5.2.3.1 Powder morphology and particle size distribution.....	115
5.2.4 Moisture content and water activity (a_w).....	115
VI DISCUSSION	117
6.1 Preliminary research.....	117
6.1.1 Effect of type of fish oil on powder stability	117
6.1.2 Effect of drying process on powder stability.....	123
6.1.3 Microencapsulation efficiency	126
6.1.4 Particle size distribution and powder morphology.....	129
6.2 Main research	131
6.2.1 Results of oxidative stability based on peroxide value vs propanal.....	132
6.2.2 Role of combination of coating materials in retarding lipid oxidation	135
6.2.2.1 Oxidative stability based on peroxide values (PVs).....	135
6.2.2.2 Oxidative stability based on formation of propanal	137
6.2.3 Comparison of encapsulations methods	143
6.2.3.1 Microcapsule production by spray granulation.....	143
6.2.3.2 Microcapsule production by spray drying.....	149
6.2.3.3 Microcapsule production by freeze drying.....	154
6.2.3.4 Moisture content, water activity and their relation to oxidation	160
6.2.3.5 Microencapsulation efficiency	161
6.2.4 The best outcomes and their comparison with other finding	163
VII. CONCLUSION.....	166
