Contents

1	Introduction	1
1.1	ER and Golgi in yeast.....	1
1.2	Organelle inheritance during budding	2
1.3	Dynamics of ER-Golgi interactions	4
1.4	Vesicle-mediated material transport between ER and Golgi.....	5
1.4.1	COP-I mediated transport.....	6
1.4.1.1	COP-I coat structure	6
1.4.1.2	Cargo recognition by coatomer.....	7
1.4.1.3	The p24 cargo receptor family	8
1.4.1.4	The COP-I transport cycle: a brief overview	9
1.5	The Dsl1 tethering complex	10
1.6	Bimolecular fluorescence complementation: A tool to study protein-protein interactions <i>in vivo</i>	13
1.7	Scope	15
2	Materials and Methods	17
2.1	Materials.....	17
2.1.1	Strains	17
2.1.2	Plasmids.....	18
2.1.3	Oligonucleotides.....	19
2.1.4	Antibodies.....	20
2.1.5	Enzymes	21
2.1.6	Chemicals and media supplements.....	21
2.1.7	Kits	22
2.1.8	Consumables.....	22
2.1.9	Technical equipment.....	22
2.2	Cell culture methods.....	24
2.2.1	<i>E. coli</i> cell culture.....	24
2.2.2	<i>S. cerevisiae</i> cell culture	25
2.2.3	Metabolic labeling of yeast cells, pulse- chase experiments	26
2.3	DNA preparation methods.....	26
2.3.1	Plasmid isolation from <i>E. coli</i>	26
2.3.2	Isolation of yeast total DNA.....	27
2.3.3	Photometric determination of DNA concentration.....	27

2.4	Molecular Biology Methods.....	28
2.4.1	DNA amplification through polymerase chain reaction (PCR).....	28
2.4.2	DNA separation and purification through agarose gel electrophoresis	29
2.4.3	DNA restriction digestion.....	29
2.4.4	Ligation.....	29
2.4.5	Sequencing	30
2.4.6	Gene modification through homologous recombination	30
2.5	Transformation methods.....	30
2.5.1	Heat shock transformation of <i>E. coli</i>	30
2.5.2	Lithium acetate transformation of <i>S. cerevisiae</i>	31
2.5.3	Electroporation transformation of <i>S. cerevisiae</i>	31
2.6	Yeast genetics methods	32
2.6.1	Crossing of <i>S. cerevisiae</i> strains	32
2.6.2	Sporulation of diploid <i>S. cerevisiae</i> cells	32
2.6.3	Tetrad analysis with the micromanipulator	33
2.6.4	Mating type identification through the halo test.....	33
2.6.5	Measurement of cell growth through spot assays	33
2.6.6	Measurement of cell growth through growth curves	34
2.6.7	Synthetic genetic array (SGA).....	34
2.7	Protein biochemistry methods	38
2.7.1	Cell disruption through glass bead extraction	38
2.7.2	Total protein isolation.....	38
2.7.3	Protein concentration measurement.....	38
2.7.4	TAP- purification of protein complexes	38
2.7.5	Immunoprecipitation	40
2.7.6	Protein separation by SDS PAGE.....	40
2.7.7	Protein staining in SDS gels	41
2.7.8	Drying of polyacrylamide gels	41
2.7.9	Transfer and immunodetection of proteins.....	41
2.7.9.1	Western blot.....	41
2.7.9.2	Ponceau stain	42
2.7.9.3	Immunodecoration	42
2.7.10	Radiogel exposure and detection	42
2.8	Imaging methods	43
2.8.1	Culture conditions for imaging.....	43
2.8.2	Sample preparation for live cell imaging.....	43

2.8.3	Imaging presets.....	43
2.8.4	FRAP experiments.....	44
2.8.5	Electron microscopy	44
2.8.6	Image processing	44
2.9	Construction of particular strains and plasmids	45
2.9.1	Construction of BiFC strains	45
2.9.2	Construction of the pRER1 plasmid.....	46
2.9.3	Construction of the pHDEL plasmid.....	46
3	Results	47
3.1	Evaluation of the suitability of the BiFC approach	48
3.1.1	Fluorescence signal specificity and localization.....	50
3.1.2	BiFC signal formation between non-cognate interaction partners	51
3.1.3	Viability and cell morphology of yeast strains	52
3.1.4	Effects of tag addition on protein expression levels	55
3.1.5	Biochemical analysis of the BiFC interactions between Dsl1 complex and COP-I coat subunits.....	57
3.2	<i>in vivo</i> interactions of the Dsl1 complex with COP-I coated vesicles.....	58
3.2.1	BiFC signals between different Dsl1 complex/ COP-I subunits	58
3.2.2	Comparison of BiFC signals to overall protein fluorescence	59
3.2.3	Polarization and dynamics of the Dsl1 complex/ COP-I coat interaction	60
3.2.3.1	Polarization throughout the cell cycle.....	60
3.2.3.2	Dynamics of spatial reorientation	63
3.2.3.3	BiFC signal recovery after whole cell bleaching	63
3.2.4	Dependence of signal polarization on growth	65
3.2.5	<i>in vivo</i> interactions of Dsl1 complex and coatomer with COP-I cargo receptor Rer1p ...	67
3.2.6	Fluorescence complementation in the binding-deficient <i>dsl1-5WA</i> mutant	71
3.2.7	COP-I vesicle polarization in Dsl1p-depleted cells	72
3.3	Association of BiFC Dsl1 complex/ coatomer interactions with organelle dynamics and inheritance	74
3.3.1	ER association	74
3.3.2	Association with different Golgi subcompartments	76
3.3.3	Actin dependence of the BiFC signal polarization	79
3.3.4	Involvement of myosin motors in the polarization of BiFC signals.....	80
3.3.5	Association of BiFC interaction signals with ER exit sites	81
3.3.6	Temporal and spatial positioning of BiFC foci to sites of secretory vesicle release	84

3.3.7	Electron microscopic evaluation of the subcellular structures involved in BiFC foci appearance	85
3.4	Investigating the function of the Dsl1p loop	87
3.4.1	Biochemical analysis of BiFC-induced binding in <i>DSL1</i> wild type and <i>dsl1-5WA</i> mutant cells.....	87
3.4.2	Synthetic genetic arrays for the identification of proteins associated with Dsl1p function.....	88
4	Discussion.....	93
4.1	The introduction of BiFC tags has no adverse effects on protein levels and cell viability	93
4.2	Bimolecular fluorescence complementation yields specific protein-protein interaction signals.....	94
4.3	The Dsl1 complex interacts with COP-I coat vesicles <i>in vivo</i> , and interaction sites are polarized	95
4.3.1	The Dsl1 complex interacts with the COP-I coat	95
4.3.2	The Dsl1 complex interacts with COP-I vesicles at spatially defined sites at the ER.....	97
4.4	ER arrival sites can be visualized independently of the use of BiFC	97
4.5	ER arrival site polarization is dependent on growth.....	98
4.6	Interactions between Dsl1 complex and COP-I vesicles in context of organelle inheritance ...	98
4.6.1	BiFC polarization depends on the actin cytoskeleton and Myo2p-mediated transport ...	99
4.6.2	BiFC signals always appear adjacent to Golgi	100
4.6.3	ER arrival sites of COP-I vesicles are always found at the ER and show a juxtapost pattern with ER exit sites.....	101
4.6.4	ER arrival sites trail the exocyst during budding.....	102
4.6.5	Organelle associations suggest a role of COP-I transport in <i>de novo</i> formation of cis-Golgi	102
4.7	General assessment of BiFC in <i>S. cerevisiae</i>	104
4.7.1	FRAP experiments show a recovery of the BiFC signal within minutes after bleaching.....	104
4.7.2	TAP pulldowns of metabolically labeled BiFC strains confirm the irreversibility of complementation <i>in vitro</i>	104
4.8	Synthetic lethality screens reveal a link between Dsl1p and p24 proteins	106
4.9	Summary of findings	108
5	Bibliography	109
6	Appendix	125
