

Preamble

This work evolved from my employment as a research associate in the Multiphase Flow Group at the Center of Applied Space Technology and Microgravity (ZARM) at the University of Bremen (Germany) from 2008 to 2014. Therefore, my first acknowledgement goes to my supervisor Prof. Dr.-Ing. habil. Michael Dreyer who has provided the scientific direction, support and allocated the necessary funds for this research. Secondly, I would like to thank Prof. Dr.-Ing. habil. Antonio Delgado, head of the institute of fluid mechanics, LSTM, of the University of Erlangen, for being the second assessor for this thesis.

Regarding my colleagues I owe the biggest gratitude to Holger Faust and Ronald Mairose, the technical staff, who turned all my crazy ideas into successful experiments. Moreover, Wilhelm Raider and Hendrik Naatz only did not a significant contribution to the CFD numerical analysis, but also shared helpful information in our discussions. Thank you! Many thanks also to my colleagues, former colleagues and friends Przemek Bronwicki, Peter Canfield, Sebastian Schmitt, Peter Prengel, Diana Gaulke, Yulia Grebenyuk, Dr.-Ing. Michael Conrath, Eckart Fuhrmann, Nikolai Kulev, Dr.-Ing. Rodion Groll, Kristofer Leach, Claudia Zimmermann, Zelimir Marojevic, Dr.-Ing. Aleksander Grah, Dr.-Ing. Ming Zhang, Dr. Yuexing Wei, Dr.-Ing. Tim Arndt, Dr.-Ing. Nicolas Fries, Dr.-Ing. Jörg Klatte, Kay Burow, and René Sionkiewicz, who not only have helped me in numerous discussions with their comments, advice and support with numerical tools, but also are responsible for the excellent working environment at ZARM. Special gratitude to Stephanie Dackow, who did a great job taking care of the literature and helping with the completion of administrative duties. Special thanks to Prof. Mark Weislogel of Portland State University, OR, USA, for his helpful discussions and insightful ideas. Climb on!

Furthermore, I would like to acknowledge the German Aerospace Center (DLR) for funding under grant number 50 RL 0921 and 50 RL 1320.

Gratitude with all my heart I owe my family. Thank you for your support during all the years and for never stop believing in me. At last, I want to dedicate this work to Dr. Yongkang

Chen, my husband, for his helpful discussions, his help with the Surface Evolver, his provision of SE-FIT and the continuous development, his patience and support and, especially, for giving me shelter and stability in my life. My appreciation is beyond my words.

Yvonne Chen

Bremen, March 2015
