Contents

1 Introduction **1**
- 1.1 Road Safety . . . 1
  - 1.1.1 Automotive Comfort and Safety Systems . . . 2
    - Comfort Systems Overview . . . 2
    - Safety Systems Overview . . . 3
- 1.2 Automotive Radar Applications – Brief History and Status . . . 4
  - 1.2.1 Automotive Short-, Mid- and Long-Range Radar . . . 5
  - 1.2.2 Automotive Radar Frequency Band Regulation . . . 5
  - 1.2.3 Multi-Channel Automotive Radar Front Ends . . . 6
- 1.3 Thesis Objectives and Organization . . . 6

2 Automotive LRR FMCW Radar – System Level Approach **9**
- 2.1 FMCW Radar Fundamentals . . . 9
  - 2.1.1 Waveform Derivation . . . 9
  - 2.1.2 Two-way Radar Equation . . . 11
- 2.2 Leakages and Reflections in FMCW Radar . . . 12
  - 2.2.1 Automotive Radar Classification According to TX-RX Separation, System Architecture and Trends . . . 13
  - 2.2.2 Antenna-Transceiver Combining . . . 14
  - 2.2.3 FMCW Radar with System Non-idealities . . . 15
    - Noise Floor with Blockers Present . . . 16
    - Analysis of Blockers Passing through a Non-linear Transfer Function . . . 21
  - 2.2.4 Conclusions . . . 28

3 Circuit Environment **29**
- 3.1 MMIC Process and Transistors . . . 29
  - 3.1.1 The Process of Choice: SG25H1 by IHP . . . 29
  - 3.1.2 HBT Modeling . . . 29
- 3.2 Passive Elements . . . 30
  - 3.2.1 Stack . . . 30
  - 3.2.2 Resistors . . . 31
  - 3.2.3 Capacitors . . . 31
  - 3.2.4 Passivated Microstrip Transmission Line Model . . . 33
    - The Selected TL Modeling Approach . . . 34
  - 3.2.5 Prober Pads Models . . . 35
    - Pad Model № 1 – RC . . . 35
    - Pad Model № 2 – RLC . . . 36

4 Design of Circuits **39**
4.1 LNA . . . 39
4.1.1 Main Requirements imposed on the LNA . . . 39
4.1.2 Transistor Sizing . . . 40
4.1.3 LNA Topology Selection . . . 40
4.1.4 Bias Point Selection . . . 44
V_{cc} value selection . . . 44
$I_{ce,q}$ value selection . . . 45
4.1.5 Low-Frequency On-Chip Bias Circuitry . . . 45
4.1.6 Matching Circuitry . . . 46
RF Input Match . . . 46
RF Output Match . . . 48
Stability . . . 49
4.1.7 Realized LNA . . . 51
4.1.8 S-Parameters . . . 52
Simulated vs. Measured S-Parameters . . . 52
4.1.9 Noise Figure . . . 54
Noise Figure Measurement Setup . . . 54
LNA NF Measurements vs. Simulations . . . 56
4.1.10 Linearity . . . 57
Linearity Measurement Setup . . . 57
Simulated vs. Measured Gain Compression . . . 57
4.1.11 Measurements vs. Simulations: Gain, Linearity, NF . . . 58
4.1.12 Benchmarks and Discussion . . . 58
4.2 Balun . . . 60
4.2.1 Main Requirements imposed on the Balun . . . 60
4.2.2 Balun Performance Evaluation Setups in Simulation and Measurement . 60
4.2.3 Active Balun . . . 61
Functionality . . . 61
Overview of Existing Topologies . . . 62
Performance . . . 62
4.2.4 Passive Balun №1 – Rat Race Coupler . . . 65
Classical Rat Race Coupler Operation Principle . . . 65
Reduced-Length Rat Race Coupler Design . . . 65
Realized Reduced-Length Rat Race Coupler . . . 67
Characterization Approach for mm-Wave Baluns . . . 67
Reduced-Length Rat Race Coupler Measurements vs. Simulations . . . 70
4.2.5 Passive Balun №2 – Transformer . . . 73
Transformer Background . . . 73
General Transformer Core Design Guidelines – Circuit Level Approach . 73
Transformer Balun Synthesis Flow – System level Approach . . . 74
Realized Transformer . . . 76
Transformer Measurements vs. Simulations . . . 77
4.2.6 Balun Overview and Discussion . . . 81
4.3 Mixer . . . 83

Dieses Werk ist copyrightgeschützt und darf in keiner Form vervielfältigt werden noch an Dritte weitergegeben werden.
Es gilt nur für den persönlichen Gebrauch.

4.3.1 Main Requirements Imposed on Mixer . . . 83
4.3.2 Mixer Balancing Approaches . . . 84
4.3.3 Transconductance Stage . . . 85
Topology Selection . . . 85
Common Mode Suppression Techniques Overview . . . 86
4.3.4 Mixer Transconductance-to-Core Interface . . . 86
4.3.5 Mixer Core . . . 87
Core Transistors' Sizing . . . 87
LO Interface . . . 92
4.3.6 Mixer IF Interface . . . 93
IF – Post-Mixer Buffering . . . 93
Mixer IF Interfaces Overview [49] . . . 93
Mixer IF Interface Design . . . 94
4.3.7 Realized Mixer . . . 94
4.3.8 Noise Figure . . . 96
DSB vs. SSB Noise Figure Definitions . . . 97
Noise Figure Measurement Setup . . . 97
Noise Figure: Single-Ended vs. Differential . . . 98
Total Noise Temperature Derivation and Analysis . . . 100
4.3.9 Linearity . . . 103
Linearity Measurement Setup . . . 103
Simulated vs. Measured Conversion Gain Compression . . . 104
4.3.10 Measurements vs. Simulations: Conv. Gain, Linearity, NF . . . 105
4.3.11 Benchmarks and Discussion . . . 105

5 Receiver Integration 107
5.1 1-Channel Receiver . . . 107
5.1.1 Realized 1-Channel Receiver . . . 107
5.1.2 Noise Figure . . . 108
Total Noise Temperature Derivation and Analysis . . . 108
5.1.3 Linearity . . . 112
Linearity Measurement Setup . . . 112
5.1.4 1-Channel RX Measurements . . . 112
Conversion Gain and NF vs. Core Bias . . . 112
Conversion Gain, Linearity, NF . . . 112
5.2 2-Channel Receiver . . . 114
5.2.1 System Architecture . . . 114
5.2.2 LO Splitter . . . 115
Functionality . . . 115
Realized LO Splitter . . . 115
Large Signal Measurements vs. Simulation . . . 116
5.2.3 Isolation . . . 117
Isolation Improvement Techniques . . . 118
5.2.4 Realized 2-Channel RX . . . 120
5.2.5 2-Channel RX Measurements . . . 120

Dieses Werk ist copyrightgeschützt und darf in keiner Form vervielfältigt werden noch an Dritte weitergegeben werden.
Es gilt nur für den persönlichen Gebrauch.

Isolation 120
Conversion Gain vs. IF 120
Conversion Gain, Linearity, Isolation, NF 120
5.2.6 Benchmarks and Discussion 123

6 Conclusions **127**

Bibliography **129**
