

CONTENTS

LIST OF ABBREVIATIONS AND SYMBOLS	VII
1. INTRODUCTION	1
1.1. Lidar	3
1.2. Optical Low Coherence Lidar	4
2. DOPPLER WIND LIDAR	7
2.1. The Optical Doppler Effect	8
2.1.1. The Optical Doppler Effect in Doppler Lidar	9
2.1.2. Doppler Broadening	10
2.1.3. Detection of Transverse Wind Speed Components	10
2.2. Continuous Wave Doppler Lidar	11
2.3. Coherent Detection	12
2.3.1. Balanced Detection	15
2.3.2. Direction Recognition	16
2.4. Doppler Lidar Setup	16
2.5. General Hardware and Frequency Analysis	17
3. OPTICAL LOW COHERENCE LIDAR	21
3.1. Coherence	21
3.2. Delayed Self-Heterodyne Method	26
3.3. Optical Low Coherence Reflectometry	27
3.4. OLCL System Setup	29
3.5. Signal Properties	31
3.5.1. Signal-to-Noise Ratio	40
3.6. Synthetic Broadband Source	41
3.6.1. Modeling Phase Noise in Natural Laser Diodes	43
3.6.2. Phase Noise Algorithm	43
3.6.3. Artificial Spectra	46

Contents

3.6.4. Phase Jumps	49
3.6.5. Phase Modulation	52
3.6.6. Setup of the Synthetic Source	55
3.7. Numerical Range Scanning	56
3.8. Simulation Results	58
3.9. Experimental Results	65
3.9.1. Spectrum of Synthetic Source	65
3.9.2. Spectral Irregularities and Comparison with Natural Laser Diode	69
3.9.3. Experimental Numerical Range Shifting	71
3.10. Disturbance Filtering	72
3.10.1. Disturbance Filtering Algorithm	73
3.10.2. Experimental Disturbance Filtering	79
4. FURTHER APPLICATIONS	83
4.1. Vibrometry	83
4.1.1. High Amplitude Vibrometry	84
4.1.2. Low Amplitude Vibrometry	85
4.1.3. Range Resolved Vibrometry	88
4.2. Differential Absorption Lidar	91
5. SUMMARY AND CONCLUSIONS	95
A. APPENDIX:	
BEAM TRANSMISSION, SCATTERING AND LAUNCHING EFFICIENCY	97
A.1. Beam Transmission	97
A.2. Scattering and Launching Efficiency	99
LIST OF PUBLICATIONS	105
