Abstract xiii
1. Introduction 1
1.1. Objectives 1
1.2. State-of-the-art 2
1.3. Thesis subjects 4
2. Models to calculate a suitable mud window 6
2.1. Coupled effects governing the stress distributions around wellbore 12
2.2. Wellbore stability evaluation criteria 13
2.2.1. Criterion to determine RTFG 14
2.2.2. Criterion to determine FG 17
2.2.3. Criterion to determine SFG 18
3. Sensitivity analysis 23
3.1. Introduction 23
3.2. Methods 24
3.3. Results 27
3.3.1. The “must-have” group 34
3.3.2. The “high-sensitive” group 35
3.3.3. The “low-sensitive” group 35
3.4. Conclusions 36
4. Methods to determine UCS, IFA and PPG 37
4.1. Introduction 37
4.2. Determination of uniaxial compressive strength (UCS) 37
4.3. Determination of internal friction angle (IFA) 39
4.4. Determination of formation pore pressure 39
5. Determination of primary in-situ stresses using borehole breakout and acoustic measurements 41
5.1. Introduction 41
5.2. Estimation of primary in-situ stresses from borehole breakout 41
5.2.1. Definition of Borehole Breakout 41
5.2.2. Building mechanisms of borehole breakout 42
5.2.3. Calculation of in-situ stresses based on breakout shape 44
5.2.4. Case study: calculation of in-situ stresses based on breakout shape 45
5.3. Estimation of primary in-situ stresses from sonic logging 46
5.3.1. Sonic logging and shear wave splitting 46
5.3.2. Relationship between wave velocity and loading conditions 50
5.3.3. Methods to calculate the horizontal stresses based on shear wave splitting 54
5.3.4. Determination of coupling coefficients 54
5.3.5. Case study: calculation of in-situ stresses based on shear wave splitting 59
5.4. Conclusions 61

6. Calculation of Biot's coefficient from well logs 62
6.1. Introduction 62
6.2. Existing correlation methods to calculate of Biot's coefficient (Method 1) 63
6.3. Calculation of Biot's coefficient with dynamic rock and solid compressibility 63
6.3.1. Calculation of solid wave velocities using own developed empirical equation (Method 2) 64
6.3.2. Calculation of solid wave velocities using V_p/V_s ratio (Method 3) 69
6.4. Case study 72
6.4.1. Method 1 72
6.4.2. Method 2 73
6.4.3. Method 3 74
6.5. Comparison of the three methods 75
6.6. Conclusions 76
7. Simulation of the temperature profiles 78
7.1. Introduction 78
7.2. Semi-analytical calculation method 79
7.2.1. Finite differential calculation of temperature distribution in rock formation 82
7.2.2. Calculation of heat exchange between annulus, tubing and formation 83
7.2.3. Simulation of the circulation process 83
7.2.4. Calculation of thermal stress using numerical integration 84
7.3. Model verification 84
7.3.1. Comparison with analytical solution after Ramey (1962) 84
7.3.2. Comparison with the measured outlet temperature 86
7.4. Principle of the injected mud temperature 89
7.5. Scenario simulation 91
7.5.1. Temperature profile for Case B 92
7.5.2. Temperature profile for Case C 96
7.5.3. Influence of parameter a^T and the initial mud temperature on bottomhole temperature (Case C) 96
7.6. Calculation of thermal stress 101
7.7. Conclusions 107
8. Case studies 108
8.1. Mud window considering HM-coupled effects 110
8.2. Mud window considering THM-coupled effects 112
9. Conclusions and outlook 122
