Table of contents

1 GENERAL INTRODUCTION 1

1.1 Background 1

1.2 Physiological aspects in cowpea 3

1.3 Effect of defoliation on growth and yield performance of cowpea 3

1.4 A review on yield stability 4

1.4.1 Stability concepts 5

1.4.2 Breeding for performance stability 7

1.4.3 Trade-off between yield stability and yield quantity 8

1.5 Objectives 9

1.6 Thesis outline 10

2 ACCESSION-SPECIFIC LEAF YIELD PERFORMANCE ACROSS REPEATED LEAF HARVESTS AND ENVIRONMENTAL INTERACTION 11

2.1 Introduction 11

2.2 Material and Methods 13

2.2.1 Experimental layout, climatic conditions and crop husbandry 13

2.2.2 Experimental layout, climatic conditions and crop husbandry 14

2.2.3 Leaf-harvesting procedure 15

2.2.4 Data collection 15

2.2.5 Data analysis 23

2.2.5.1 Stability parameters 24

2.2.5.2 Reliability and test-check differences 25

2.3 Results 27

2.3.1 Environmental impact on leaf yield production 27

2.3.2 Impact of phenological traits on leaf yield production 27

2.3.3 Leaf yield stability across seasons and locations 29

2.3.4 Environmental interaction with yield performance across single leaf harvests 32

2.4 Discussion 36

2.4.1 Leaf yield production and environmental factors 36

2.4.2 Leaf yield stability across environments 38

2.4.3 Variance of leaf yields across single leaf harvests 39

2.4.4 Combining dynamics in leaf yield performance across environments and single leaf harvests 40

2.5 Conclusions 45

3 FLUCTUATIONS OF CRUDE PROTEIN AND IRON CONTENTS IN YOUNG COWPEA LEAVES ACROSS LOCATIONS AND SUCCESSIVE LEAF HARVESTS 47

3.1 Introduction 47

3.2 Material and Methods 51

3.2.1 Plant material and experimental layout 51

3.2.2 Determination of nutritional quality of cowpea leaves 52

3.2.2.1 Reference analysis 52

3.2.2.2 Estimations of leaf nutrients by using NIRS 53

3.2.3 Calculation of effective plot length (EPL_{xy}) 57

3.2.4 Data analysis 59
3.2.4.1 Multiple regression 59
3.2.4.2 GxE interactions 59
3.3 Results 60
3.3.1 GxE interactions of crude protein and iron content in young cowpea leaves 61
3.3.2 Comparisons of crude protein and iron contents in cowpea leaves across locations and leaf harvests 62
3.3.3 Comparisons of effective plot lengths for crude protein and iron contents in cowpea leaves across locations and leaf harvests 63
3.3.4 Relationships among effective plot length and other yield parameters 65
3.4 Discussion 66
3.4.1 Crude protein in cowpea leaves 66
3.4.2 Iron in cowpea leaves 67
3.4.3 Estimating yield benefit based on qualitative and quantitative leaf traits 68
3.5 Conclusions 69
4 THE IMPACT OF ALTERING LEAF-HARVESTING SCENARIOS ON THE DUAL-PURPOSE UTILITY OF DIFFERENT COWPEA ACCESSIONS 71
4.1 Introduction 71
4.2 Material and Methods 72
4.2.1 Experimental layout, plant material, and variables assessed 72
4.2.2 Data analysis 75
4.2.3 Leaf harvest effect 76
4.2.4 Responsiveness 76
4.3 Results 78
4.3.1 Impact of different leaf-harvesting frequencies on plant agro-morphology, phenology, and yield parameters 78
4.3.1.1 Effect of leaf harvesting on plant agro-morphology 78
4.3.1.2 Effect of leaf harvesting on phenological traits 81
4.3.1.3 Effect of leaf harvesting on seed yield traits 81
4.3.1.4 Effect of leaf harvesting on leaf yield 83
4.3.2 Leaf and seed yield interaction 84
4.3.2.1 Total edible dry matter yield 84
4.3.2.2 Responsiveness 85
4.4 Discussion 86
4.4.1 Effect of leaf harvesting on growth type 86
4.4.2 Effect of leaf harvesting on plant growth and morphology 87
4.4.3 Relation between leaf harvest effect, physiological and phenological traits 88
4.4.4 Total edible dry matter yields 89
4.4.5 Responsiveness 90
4.5 Conclusions 91

5 COMBINING LEAF AND SEED YIELD PERFORMANCE TO SELECT SUPERIOR DUAL-PURPOSE COWPEAS 93
5.1 Introduction *93*
5.2 Material und Methods *95*
5.2.1 Experimental layout and sampling procedure 95
5.2.2 Data analysis 97
5.2.2.1 Stability parameters 97
5.2.2.2 Reliability and test-check differences 97
5.2.2.3 Index of superiority (S_i) 98
5.3 Results *99*
5.3.1 Genotype-environment interactions of leaf and seed yield traits 99
5.3.2 Effect of leaf harvesting on seed yield 99
5.3.3 Seed yield stability and reliability of leaf-harvested cowpeas 101
5.3.4 Determination of superiority 104
5.3.5 Impact of dynamics in single leaf harvests of dual-purpose accessions on the superiority index 105
5.4 Discussion *107*
5.4.1 Environmental impact on cowpea yield components 107
5.4.2 Effect of location on relationship between reliability and stability of seed yield 108
5.4.3 Accuracy of greatest lower bounds for yield traits 109
5.4.4 Application of the superiority index and farmers' demands 110
5.5 Conclusions *111*
