List of Symbols and Abbreviations.....	7
Abstract.....	11
Zusammenfassung.....	15
1. Introduction.....	19
2. Theoretical Background.....	25
2.1 Controlled Motion of Microscopic Structures	25
2.1.1 Actuation Strategies and “Microrobot” Designs.....	25
2.1.2 Low Reynolds Number Propulsion.....	29
2.1.3 Effects of Brownian Motion.....	31
2.2 Complex Micro- and Nanoparticles	33
2.2.1 Fabrication Schemes.....	34
2.2.2 Glancing Angle Deposition.....	38
2.3 Biological Media	41
2.3.1 Hyaluronan.....	42
2.3.2 Mucin.....	44
2.3.3 Micropropulsion in Complex Fluids	47
3. Chiral Colloidal Molecules.....	49
3.1 Fabrication and Characterization	51
3.1.1 Langmuir-Blodgett Deposition	52
3.1.2 Glancing Angle Deposition.....	54
3.1.3 Magnetic Properties.....	56
3.1.4 Circular Differential Light Scattering	57
3.2 Chiral Separation.....	59
3.2.1 Experimental Observations	59
3.2.2 Analytical Analysis of the Propulsion Mechanism.....	62
3.3 Methods	67
4. Nanopropellers and their Propulsion in Complex Viscoelastic Media.....	69
4.1 Fabrication and Characterization	71
4.1.1 Synthesis, Structure, and Yield	71
4.1.2 Magnetic Properties.....	75
4.2 Propulsion in Newtonian Fluids.....	76

4.2.1	Viscosity-Dependent Propulsion Behavior	76
4.2.2	Minimum size Requirements and Theoretical Predictions	78
4.3	Propulsion in Hyaluronan.....	80
4.3.1	Properties of Hyaluronan	80
4.3.2	Propulsion Experiments	81
4.4	Methods	84
5.	Biomimetic Micropropellers in Mucin Gels	87
5.1	Fabrication Process	90
5.1.1	Acid-Stable Micropropellers	91
5.1.2	Urease Immobilization	93
5.2	Micropropellers in Mucin.....	95
5.2.1	Rheological Properties of Mucin Gels	95
5.2.2	Suppression of Muco-Adhesion	96
5.2.3	Propulsion in Mucin Gels.....	98
5.3	Methods	101
6.	Conclusion	105
	References	109
