

TABLE OF CONTENTS

<u>1</u>	<u>Introduction</u>	<u>3</u>
1.1	Nature's Energy Source – The Photosynthesis	5
1.2	Artificial Photosynthesis – Possible Energy Supply of the Future	8
1.3	Water Oxidation Catalysis – Demands and Investigative Strategies	10
1.3.1	The Structure of Metal-Oxo Compounds	11
1.3.2	Mechanisms of Water Oxidation Catalysis	13
1.3.3	Catalyst Analysis –Strategies of Investigation	18
1.3.4	Choice of the Catalytically Active Site - Suitable Transition Metals	24
1.4	Milestones in Ruthenium-Based Water Oxidation Catalysis Research	27
1.4.1	The Blue Dimer	28
1.4.2	The Ru ₂ - ^H bpp Complexes	30
1.4.3	The Ru ₂ - ^{Me} bbp Complex	32
1.4.4	The Series of [Ru{N ₃ }{N ₂ }(H ₂ O)]-Type Complexes	34
1.4.5	The Ru-bda Complexes	39
1.4.6	The Ru ₂ -H ₂ dabimp Complex	42
<u>2</u>	<u>Objectives</u>	<u>45</u>
<u>3</u>	<u>Complexes with a Bis(pentadentate) Ligand System</u>	<u>49</u>
3.1	Introduction	49
3.2	Synthesis of the Ligand and Ru- and Mn-Complexes	52
3.3	Structural Characterisation in Solution and Solid State	56

TABLE OF CONTENTS

3.3.1	The Ligand HL ^{bis5}	56
3.3.2	Ruthenium containing Complexes	57
3.3.3	The Manganese Containing Complex	60
3.4	Dynamic NMR Investigations of Ru ^{bis5} (MeCN) ₂	63
3.5	Investigations of Redox Chemistry	66
3.6	Water Oxidation Catalysis	72
3.7	Conclusion	74
4	<u>Ruthenium Complexes with Two Similar Bis(tridentate) Ligand Systems Containing Benzimidazole Side Arms.</u>	77
4.1	Introduction	77
4.1.1	Ruthenium WOCs Containing Benzimidazole Functions	77
4.1.2	Targeted Ligand Design and Their Binuclear Ruthenium WOCs	79
4.2	Synthesis of Ligands and Ru Complexes	81
4.2.1	Bis(tridentate) Ligands HL ^{IM-H} and HL ^{IM-Me}	81
4.2.2	Complex Synthesis with Axial Pyridine Ligands	82
4.2.3	Complex Synthesis with Pyridine Derivatives as Axial Ligands	83
4.3	Characterisation in Solution and Solid State	85
4.3.1	The Ligands HL ^{IM-H} and HL ^{IM-Me}	85
4.3.2	Complexes with Pyridine as Axial Ligands	87
4.3.3	Complexes with Pyridine Derivatives as Axial Ligands	91
4.4	Investigation of Redox Chemistry	93
4.4.1	Electrochemical Measurements – Cyclic Voltammetry	93
4.4.2	Spectroelectrochemical Measurements	97

4.4.3	Redox Properties of $1^{\text{IM-H}}(\text{OAc})$ and $1^{\text{IM-Me}}(\text{OAc})$ in Comparison	100
4.5	Water Oxidation Catalysis	103
4.6	Conclusion	106
5	<u>Ruthenium Complexes with a Trianionic Ligand System</u>	111
5.1	Introduction	111
5.1.1	The Implementation of the Carboxylate Functions in Ligand Design	111
5.1.2	Impact of Axial Ligand Variations on Catalyst Complexes	115
5.1.3	Targeted Design of the New Pyrazolate Bridged Dicarboxylate Ligand System and its Ruthenium Complexes	117
5.2	Synthesis of the Ligand and Complexes	120
5.3	Characterisation in Solution and Solid State	122
5.3.1	Complexes with Pyridine ($1^{\text{COO}}(\text{X})$)	122
5.3.2	Complexes with Isoquinoline ($2^{\text{COO}}(\text{X})$)	126
5.4	Generating the Catalyst	130
5.5	Redox Chemistry in Organic Solvents	132
5.6	Redox Chemistry in Aqueous Solution	135
5.7	Chemical Water Oxidation Catalysis	139
5.7.1	The Catalysis Experiment	139
5.7.2	The Anation Effect	142
5.7.3	Species Analysis after Catalysis	143
5.8	Electrochemical Water Oxidation Catalysis	145

TABLE OF CONTENTS

5.9 Oxidation of the Bridging Methanol to Formate under Ambient Conditions	147
5.10 Conclusion	150
<u>6</u> <u>Résumé</u>	<u>155</u>
<u>7</u> <u>Experimental Part</u>	<u>163</u>
7.1 Materials and Instrumentation	163
7.2 Synthesis of Ligands and Precursors	166
7.3 Complex Synthesis	174
<u>Appendix</u>	<u>191</u>
Crystallography	191
Bibliography	197
Abbreviations	207
NMR Spectra of Ligands and Complexes	211
ESI Mass Spectrometry of Ligands and Complexes	257
Spectroelectrochemical Measurements	264
Electrocatalytic Studies	265
Overview of Compounds	267
List of Scientific Contributions	270
Acknowledgement	271
Curriculum Vitae	273
