Laura Maria Feldmar (Autor)

Testing the Limits of the Cyrogenic Nucleation Pulse Chamber

TESTING THE LIMITS OF THE
CRYOGENIC NUCLEATION PULSE CHAMBER

Contents

1 Introduction ............................................. 1
   1.1 Nucleation phenomena .............................. 1
   1.2 Literature overview ................................ 3
   1.3 Overview of available data ......................... 6
      1.3.1 Water ....................................... 6
      1.3.2 Argon ....................................... 7
      1.3.3 Nucleation onsets of nitrogen ................. 8
      1.3.4 Growth rates ................................ 9
   1.4 Task description .................................. 10

2 Theory .................................................. 12
   2.1 Nucleation theory .................................. 12
   2.2 Other nucleation theories ......................... 15
      2.2.1 Nucleation theory according to Girshick and Chiu 15
      2.2.2 Classical nucleation theory according to Reiss, Kegel and Katz 16
      2.2.3 Density functional theory ...................... 17
   2.3 Nucleation theorem ................................ 17
   2.4 Semi-empirical approaches ......................... 18
   2.5 Droplet growth theory ............................. 19
      2.5.1 Mass flow in the Continuum Regime ............ 19
      2.5.2 Mass flow in the Free molecule regime ........ 21
      2.5.3 Mass flow in the transition regime ........... 23
   2.6 Heat flow ......................................... 24
      2.6.1 Heat flow in the continuum regime ............ 24
2.6.2 Heat flow in the free molecule regime ................. 24
2.6.3 Heat flow in the transition regime .................... 24

3 Experiment
3.1 The Cryogenic Nucleation Pulse Chamber ............... 26
  3.1.1 Gas mixing system ................................ 26
  3.1.2 Nucleation pulse chamber ....................... 27
3.2 Room temperature experiments .......................... 29
3.3 Detection system ...................................... 33
3.4 Data Analysis ......................................... 36
  3.4.1 Finding the onset conditions ....................... 36
  3.4.2 Finding the number of particles ................... 38
3.5 Determining the growth rate of a cluster ............... 38
3.6 Modelling the droplet growth .......................... 41
  3.6.1 System temperature during and after the growth process ... 41
  3.6.2 Droplet radius at the end of the growth process ........ 44
  3.6.3 Calculating droplet growth curves ................. 45

4 Results
4.1 Homogeneous nucleation rates of water .................. 47
4.2 Argon .................................................. 57
4.3 Nitrogen ............................................... 68
4.4 Comparison with literature data ........................ 68
4.5 Growth rates .......................................... 69
4.6 Comparison between theory and experiment .............. 74
  4.6.1 Scattered light signal ............................. 80
4.7 Including the expansion temperature .................... 83
  4.7.1 Supersaturation during the growth process .......... 86
4.8 Pure nitrogen ........................................... 88

5 Summary

6 Outlook

7 Appendix
  7.1 General constants and formulae ........................ 96
  7.2 Thermophysical properties of helium .................. 96
